The present study is corpus-based in design. It primarily investigated author stance across doctoral dissertations of native and non-native academic authors of English. It includes the analysis of the epistemic adjectives that are frequently reported to occur in the written academic registers in Biber's study (2006), as illustrated in Table 2 .

A Corpus-Based Study on Epistemic Adjectives in Academic ...

Corpus linguistics is the study of language based on large collections of "real life" language use stored in corpora (or corpuses) - computerized databases created for linguistic research. It is also known as corpus-based studies.

Definition and Examples of Corpus Linguistics

Corpus linguistics is a methodology of linguistic analysis that views "naturally-occurring" language as a credible source for the investigation and classification of linguistic structures (Neselhauff 2011).

Xiong and Huang's study (2015) on the Mandarin gustatory adjective 苦 kǔ 'bitter' demonstrated that its transfer directions are different from its English counterpart. In this study, we adopted a corpus-based approach to focus on the synaesthetic metaphors of Mandarin gustatory adjectives.

What is a grammatical unit? How does grammatical structure evolve? How can we best investigate the mental representation of grammar? What is the connection between language use and language structure? This book aims to help answer such questions by presenting a detailed analysis of English complex prepositions (e.g. in spite of or with respect to) on the basis of large amounts of authentic language data dating from the Middle Ages until today.

Covering the major approaches to the use of corpus data, this work gathers together influential readings from leading names in the discipline, including Biber, Widdowson, Sinclair, Carter and McCarthy.

Non-literal language is ubiquitous in everyday life, and while hyperbole is a major part of this, it has so far remained relatively unexplored. This volume provides the first investigation of hyperbole in English, drawing on data from genres such as spoken conversation, TV, newspapers, and literary works from Chaucer to Monty Python. Combining quantitative and qualitative analyses, it uses approaches from semantics, pragmatics, discourse analysis and classical rhetoric to investigate in detail both speaker-centered and emotive aspects of hyperbole, and also addressee-related aspects, such as interpretation and interactional uptake. Illustrated with a range of diachronic case studies, hyperbole is also shown to be a

Online Library A Corpus Based Study On English Prepositions Of Place In

main means of linguistic creativity, and an important contributor to language change. The book concludes with an exploration of the role of hyperbole in political speaking, humour, and literature. Original and in-depth, it will be invaluable to all those working on meaning, discourse, and historical linguistics.

Idioms represent a fascinating linguistic phenomenon that has captured the attention of many linguists for decades. This corpus-based study of idioms in Modern Standard Arabic sheds light on their intricate nature, establishes the major patterns of their linguistic behaviour, and provides explanations for these patterns. Adopting a descriptive framework, the study addresses two main issues with regard to the discursive behaviour of idioms: the discursive functions that they perform and the ways in which they contribute to the cohesion of their texts. Examining primary data with regard to the semantic, discursive, lexical and grammatical properties of Arabic idioms, the author touches on the ubiquity of these expressions in language use, the wide range of functions they perform in discourse, the problems they often cause in domains such as foreign language learning and translation, and their typical divergence from the normal rules of grammar and semantic compositionality. Providing explanations for major linguistic phenomena, this analysis will be accessible to linguists, translators, lexicographers, translation software developers, and language teachers as well as learners.

The future of English linguistics as envisaged by the editors of *Topics in English Linguistics* lies in empirical studies which integrate work in English linguistics into general and theoretical linguistics on the one hand, and comparative linguistics on the other. The *TiEL* series features volumes that present interesting new data and analyses, and above all fresh approaches that contribute to the overall aim of the series, which is to further outstanding research in English linguistics.

This book presents the methodology, findings and implications of a large-scale corpus-based study of the metaphors used to talk about cancer and the end of life (including care at the end of life) in the UK. It focuses on metaphor as a central linguistic and cognitive tool that is frequently used to talk and think about sensitive and subjective experiences, such as illness, emotions, death, and dying, and that can both help and hinder communication and well-being, depending on how it is used. The book centers on a combination of qualitative analyses and innovative corpus linguistic methods. This methodological assemblage was applied to the systematic study of the metaphors used in a 1.5-million-word corpus. The corpus consists of interviews with, and online forum posts written by, members of three stakeholder groups, namely: patients diagnosed with advanced cancer; unpaid carers looking after a relative with a diagnosis of advanced cancer; and healthcare professionals. The book presents a range of qualitative and quantitative findings that have implications for: metaphor theory and analysis; corpus linguistic and computational approaches to metaphor; and training and practice in cancer care and hospice, palliative and end-of-life care.

Bachelor Thesis from the year 2014 in the subject Speech Science / Linguistics, grade: 5, , language: English, abstract: The aim of this thesis is to discuss certain aspects of the language of book reviews, stressing the importance and indispensability of a corpus-based approach in any study of this type. The thesis is to show that the register of book reviewing is a specialized language, characterized by specific vocabulary. By this is meant that there exist some words and phrases which tend to be used more frequently here than in other registers, or that some

Online Library A Corpus Based Study On English Prepositions Of Place In

words have a special, narrowed meaning. For this purpose the researcher has compiled her own corpus of book reviews in an electronic form, which provides the foundation for the analysis. This collection of written language samples is referred to as the Do-It-Yourself Book Review Corpus (henceforth, DIY BRC). As regards the source of materials, the reviews come from the websites of popular quality newspapers. In order to ensure the research a relatively high reliability, the linguistic data needs to be as large as possible. Therefore, my corpus (DIY BRC) totals approximately 115 000 words derived from as many as 166 book reviews. The mean sample size is between 660 and 982 words.

This volume consists of selected papers from the 2009 meeting of the American Association for Corpus Linguistics. The chapters cover aspects of language use (usage-based accounts of morphology/syntax of English and Tok Pisin), language learning (corpus-based learning of English, syntactic development observable in a Learner Corpus of English, 'core' vocabulary items for learners of English) and language documentation (a new and innovative usage-based frequency dictionary of English, proposals to broaden the traditional understanding of a corpus in various directions, e.g., constructing a corpus of the content of Japanese manga comics). Taken together, the thirteen chapters represent a good cross-section of strands of new work in corpus linguistics, as practised by international scholars working on English and other languages.

This book provides the first empirical study of the history and spread of mediopassive constructions. It investigates the productivity of the pattern, the spread of the construction in Modern English, and looks into text type-specific preferences for the construction. On a more abstract level, it combines the corpus-based description of mediopassive constructions with cognitive linguistic models, drawing largely on notions such as 'prototype', 'family resemblances', 'patch' and 'construction'. The theoretical modelling is largely based on data from real texts. These come from publicly available machine-readable corpora, text-databases and a single-register 'corpus' (American mail-order catalogues). The study combines the corpus-based approach with cognitive theories and is therefore of interest to both empirical and theoretical linguists.
