This reference discusses both technical & theoretical aspects of routine blood banking & is used throughout the world as a resource document for the performance of laboratory tests to ensure blood transfusion safety.

Authoritative experts in transfusion medicine describe in critical detail the most important procedures for obtaining, selecting, and transfusing red blood cells to patients. The topics covered include such key issues as transfusion problems in the immunocompromised, the complications of autoantibodies, transfusion of infants with hemolytic disease, difficulties arising from solid organ transplantation, stem cell transfusions, and the challenges of massive transfusion. Also discussed are the use, limitations, and alternatives to autogeneic cells; long-term red cell transfusion; the management of adverse reactions to red cell transfusions; and the question of blood group antigens and their association with disease and differential diagnosis. The book offers transfusion specialists fresh insights and information to maximize and extend their current knowledge.

In the absence of substitutes, the use of blood components remains essential in therapy. This guide contains a compendium of measures designed to ensure the safety, efficacy and quality of blood components and is particularly intended for all those working in blood transfusion services. In accordance with the approach recommended by the Council of Europe in this field, it is based on the premise of voluntary, non-remunerated blood donation. It describes the different blood components and gives information on their clinical indications and possible side effects.

This well-respected compilation has stood for many years as one of the most widely used references for serologic methods. Usable as a manual of standard operating procedures (SOPs) for blood centers, transfusion services and immunohematology reference laboratories, the third edition has been updated throughout to reflect current modifications to protocols and SOP formats after a base of routine methods.
