This volume explores why natural places such as caves, mountains, springs and rivers assumed a sacred character in European prehistory, and how the evidence for this can be analysed in the field. It shows how established research on votive deposits, rock art and production sites can contribute to a more imaginative approach to the prehistoric landscape, and can even shed light on the origins of monumental architecture. The discussion

Landscapes, asserting the fundamental significance of the bones of the land in the process of human occupation over the long durée. Granite uplands, rolling chalk downlands, sandstone moorlands, and pebbled hilltops each create their own potentialities and symbolic resources for human settlement and require forms of social engagement. Taking his findings from years of phenomenological fieldwork experiencing different landscapes with all senses and from many angles, Tilley creates a saturated and historically imaginative account of the landscapes of southern England and the people who inhabited them. This work is also a key theoretical statement about the importance of landscapes for human settlement.

A comprehensive overview, by period and region, of the archaeology of ritual and

**Religion.** The coverage is global, and extends from the earliest prehistory to modern times. Written by over sixty renowned specialists, the Handbook presents the very best in current scholarship, and will also stimulate further research.

The impacts of climate change on human societies, and the roles those societies themselves play in altering their environments, appear in headlines more and more as concern over modern global climate change intensifies. Increasingly, archaeologists and paleoenvironmental scientists are looking to evidence from the human past to shed light on the processes which link environmental and cultural change. Establishing clear contemporaneity and correlation, and then moving beyond correlation to causation, remains as much a theoretical

task as a methodological one. This book addresses this challenge by exploring new approaches to human-environment dynamics and confronting the key task of constructing arguments that can link the two in concrete and detailed ways. The contributors include researchers working in a wide variety of regions and time periods, including Mesoamerica, Mongolia, East Africa, the Amazon Basin, and the Island Pacific, among others. Using methodological vignettes from their own research, the contributors explore diverse approaches to human-environment dynamics, illustrating the manifold nature of the subject and suggesting a wide variety of strategies for approaching it. This book will be of interest to researchers and scholars in Archaeology, Paleoenvironmental Science, Ecology, and Geology.

The Companion to Social Archaeology is the first scholarly work to explore the encounter of social theory and archaeology over the past two decades. Grouped into four sections - Knowledges, Identities, Places, and Politics - each of which is prefaced with a review essay that contextualizes the history and developments in social archaeology and related fields. Draws together newer trends that are challenging established ways of understanding the past. Includes contributions by leading scholars who instigated major theoretical trends.
