Ce livre a pour objectif de vous former à la réalisation d'applications Android pour appareils mobiles à l'aide de la plateforme App Inventor 2 initialement conçue par Google, des premières étapes de réflexion jusqu'à la mise en ligne sur le Play Store. Il s'adresse aux non développeurs ayant besoin de monter en compétence sur ce sujet et aux passionnés avides de faire leurs propres expériences. Le premier chapitre présente App Inventor 2, la popularité de cette solution, son contexte d'utilisation, ses possibilités, en se basant sur des exemples d'applications existantes. Le deuxième chapitre vous montre comment créer, en quelques minutes, une application pour mobile fonctionnelle sur App

Inventor 2, sans être développeur. Le chapitre suivant présente une méthodologie de travail reposant sur la réflexion que vous devez avoir en amont, avant la création de toute application sur mobile, afin de mener votre projet à terme sans avoir à le reconsidérer durant la phase de conception ; il présente également des outils pratiques qui vous permettront de créer des applications robustes que vous pourrez par la suite partager autour de vous, voire commercialiser sur le Play Store de Google. Le quatrième chapitre présente en détail l'environnement de travail d'App Inventor 2 et de nombreuses techniques pour être encore plus efficace au quotidien. Les chapitres suivants, qui représentent le coeur de l'ouvrage, détaillent l'ensemble des composants présents sur la plateforme, ils comprennent de nombreux exemples que vous pourrez reproduire afin de vous approprier au mieux cette solution. App Inventor 2: Databases and Files is a step-by-step guide to writing apps that use TinyDB, TinyWebDB, Fusion Tables and data files for information storage and retrieval. Includes detailed explanations, examples, and a link to download sample code. This is the first tutorial to cover all of these App Inventor database and file features. If your apps need to work with data or files - you need this book! TinyDB stores data on your smart phone or tablet and is a primary way for App Inventor apps to save data, even when the app is no longer running or if the device is turned off. TinyWebDB is similar to TinyDB, but stores your data on a remote server in the network cloud. Multiple apps can share a TinyWebDB database, plus you can update the content of your TinyWebDB using just a

web browser. This means you can distribute an app whose content can change over time - just by changing the values in TinyWebDB. A big challenge is the need to set up a TinyWebDB server - this book shows how to do that through free services offered by Google. Fusion Tables provide a powerful, cloud-based database system for App Inventor apps. Creating, retrieving, updating and deleting data is done using the industry standard Structured Query Language or SQL. Fusion Tables reside in the Google network cloud - this book shows you how to set up and configure Fusion Tables for you own apps using free services of Google. As your app requirements grow, Google's cloud can provide low cost servers and bandwidth for your needs. Underneath the Android OS user interface, there is a file system, similar to the file system found on Windows or Mac OS X. With App Inventor your apps can write and read data from files, and
