The book consists of 21 chapters which present interesting applications implemented using the LabVIEW environment, belonging to several distinct fields such as engineering, fault diagnosis, medicine, remote access laboratory, internet communications, chemistry, physics, etc. The virtual instruments designed and implemented in LabVIEW provide the advantages of being more intuitive, of reducing the implementation time and of being portable. The audience for this book includes PhD students, researchers, engineers and professionals who are interested in finding out new tools developed using LabVIEW. Some chapters present interesting ideas and very detailed solutions which offer the immediate possibility of making fast innovations and of generating better products for the market. The effort made by all the scientists who contributed to editing this book was significant and as a result new and viable applications were presented.

This book constitutes the refereed proceedings of the Third International Conference on COTS-Based Software Systems, ICCBSS 2004, held in Redondo Beach, CA, USA, in February 2004. The 27 revised papers presented together with summaries of workshops, panels, and tutorials were carefully reviewed and selected from 57 submissions. The papers address all current issues on commercial-off-the-shelf based software systems, from the point of view of research and development as well as from the practitioner's point of view and spanning the entire software life cycle.

The digitization of healthcare has become almost ubiquitous in recent years, spreading from healthcare organizations into the homes and personal appliances of practically every citizen. Thanks to the collective efforts of health professionals, patients and care providers as well as systems developers and researchers, the entire population of Europe is able to participate in and enjoy the benefits of digitized health information. This book presents the proceedings of the 26th Medical Informatics in Europe Conference (MIE2015), held in Madrid, Spain, in May 2015. The conference brings together participants who share their latest achievements in biomedical and health Informatics, including the role of the user in digital healthcare, and provides a forum for discussion of the inherent challenges to design and adequately deploy ICT tools, the assessment of health IT interventions, the training of users and the exploitation of available information and knowledge to further the continuous and ubiquitous availability and interoperability of medical information systems. Contributions address methodologies and applications, success stories and lessons learned as well as an overview of on-going projects and directions for the future. The book will be of interest to all those involved in the development, delivery and consumption of health and care information.

The North American Integrated Services Digital Network (ISDN) Users' Forum developed this national ISDN solutions catalog, which explains over 30 solutions for ISDN applications that members identified as most important in a recent survey. Some of the solutions detailed include video conferences, screen sharing, facsimile, caller ID, telecommunications and file transfer. Also lists more than 120 products that 60 suppliers have identified as part of these solutions.

These proceedings represent the worldwide picture of the state of the art of geodesy. The volume comprehensively covers the most recent results and supplies a good review of the new ideas developing in the field, opening a window to the future of geodesy.
