Young teens undergo multiple changes that seem to set them apart from other students. But do middle schools actually meet their special needs? The authors describe some of the challenges and offer

ways to tackle them, such as reassessing the organization of grades K-12; specifically assisting the students most in need; finding ways to prevent disciplinary problems; and helping parents understand how they can help their children learn at home.

"Integrate Math III is the final course in the three-course Integrated Math series. With this course, students further explore quadratic functions and extend learning to polynomial functions. Students extend their understanding of arithmetic and geometric sequences to series, and their knowledge of trigonometric ratios to trigonometric functions. Additionally, students explore distributions of data, confidence intervals, and statistical significance." -- publisher

Imagine your students tackling math word problems drawn from the extreme sports of polar ice swimming, scuba diving, and adventure racing. World champion athletes (like Erik Weihenmeyer, the first blind man to climb Mount Everest) present real math problems they face while scaling peaks, hang gliding off cliffs, kayaking over waterfalls, riding raging bulls, and plunging down steep cliffs on mountain bikes. Taught by the athletes, using basic multiplication, division, fractions, and percentages, your students will figure out that math is essential even in the world of extreme sports . . . and it can be fun! Activities include: Polar bear swimmers: How many strokes will it take us to swim across this hole in the ice? Master skydiver: How many miles have we fallen so far? Master scuba divers: How long will our air tanks last

at 99 feet under water? World champion kayaker: How tall is this waterfall, anyway? High school rodeo champion: How much money do I get if I win? World champion adventure racer: How many calories do we need to pack for a 6-day race across glaciers, arid peaks, thick brush, and mangrove swamps? Master hang glider: How do you get this thing to go down? Like the authors' previous book, the best-selling Real Life Math Mysteries, the word problems in this book are real, alive, and clearly focused. Each problem is provided on a reproducible handout and includes problem-solving suggestions with a comprehensive answer key. Many of the athletes share their thoughts and encouragement to study hard in school. All activities are tied to the standards established by the National Council of Teachers of Mathematics.

In math, like any subject, real learning takes place when students can connect what they already know to new ideas. In "Connecting Mathematical Idea"s, Jo Boaler and Cathy Humphreys offer a comprehensive way to improve your ability to help adolescents build connections between different mathematical ideas and representations and between domains like algebra and geometry. "Connecting Mathematical Ideas" contains two-CDs worth of video case studies from Humphreys' own middle-school classroom that show her encouraging students to bridge complex mathematical concepts with their prior knowledge. Replete with math talk and coverage of topics like representation, reasonableness, and proof, the CDs also include complete transcripts and study questions

that stimulate professional learning. Meanwhile, the accompanying book guides you through the CDs with in-depth commentary from Boaler and Humphreys that breaks down and analyzes the lesson footage from both a theoretical and a practical standpoint. In addition to addressing the key content areas of middle school mathematics, Boaler and Humphreys pose and help you address a broad range of frequently asked pedagogical questions, such as: How can I organize productive class discussions? How do I ask questions that stimulate discussion and thought among my students? What's the most effective way to encourage reticent class members to speak up? What role should student errors play in my teaching? Go inside real classrooms to solve your toughest teaching questions. Use the case studies and the wealth of professional support within "Connecting Mathematical Ideas" and find new ways to help your students connect with math.

"This is a program that focuses on all 3 modes of communication (interpersonal, presentational, interpretive) and was designed with the Common Core State Standards (CCSS) in mind."--Amazon/Publisher.
