This presentation describes various aspects of the regulation of tissue oxygenation, including the roles of the circulatory system, respiratory system, and blood, the carrier of oxygen within these components of the cardiorespiratory system. The respiratory system takes oxygen from the atmosphere and transports it by diffusion from the air in the alveoli to the blood flowing through the pulmonary capillaries. The cardiovascular system then moves the oxygenated blood from the heart to the microcirculation of the various organs by convection, where oxygen is released from hemoglobin in the red blood cells and moves to the parenchymal cells of each tissue by diffusion. Oxygen that has diffused into cells is then utilized in the mitochondria to produce adenosine triphosphate (ATP), the energy currency of all cells. The mitochondria are able to

produce ATP until the oxygen tension or PO₂ on the cell surface falls to a critical level of about 4 – 5 mm Hg. Thus, in order to meet the energetic needs of cells, it is important to maintain a continuous supply of oxygen to the mitochondria at or above the critical PO₂. In order to accomplish this desired outcome, the cardiorespiratory system, including the blood, must be capable of regulation to ensure survival of all tissues under a wide range of circumstances. The purpose of this presentation is to provide basic information about the operation and regulation of the cardiovascular and respiratory systems, as well as the properties of the blood and parenchymal cells, so that a fundamental understanding of the regulation of tissue oxygenation is achieved.

Herbal Formularies for Health Professionals is a five-volume set that serves as a comprehensive, practical reference manual for herbalists, physicians, nurses, and allied health professionals. Dr. Jill Stansbury draws on her decades of clinical experience and her extensive research to provide an unparalleled range of herbal formulas. Organized by body system, each volume includes hundreds of formulas to treat common health conditions, as well as formulas that address specific energetic or symptomatic presentations, including Dr. Stansbury's own formulas, formulas from herbal folklore, and formulas from Traditional Chinese Medicine. For each formula, Dr. Stansbury offers a brief explanation of how the selected herbs address the specific condition. The book offers many sidebars and user-friendly lists--helping readers quickly choose which herbs are best for specific presentations--and details traditional uses of both western herbs and

traditional Asian herbs and formulas that are readily available in the United States. Volume II focuses on circulation and respiration, offering formulas and supporting information for treating a wide range of vascular, pulmonary, and respiratory conditions, including angina, coronary artery disease, hypertension, congestive heart failure, Reynaud's syndrome, anemia, coughs, bronchitis, cystic fibrosis, and emphysema. Each volume in the set also includes: a discussion of how herbal therapy fits into an overall treatment plan or approach for a particular health condition modern research findings on individual herbs and their mode of action in the body lists of herbs that might be beneficial for specific conditions advice on botanicals to avoid for particular conditions Each chapter includes a materia medica section listing 50 or more individual herbs with tips on their properties, modes of action, and very specific symptoms each plant best addresses. These formularies are also a tutorial for budding herbalists on the sophisticated art of fine-tuning the precision of an herbal formula for the constitution and overall health condition of an individual patient, rather than a basic diagnosis. The text aims to teach via example, helping clinicians develop their own intuition and ability to create effective herbal formulas. Volume 1 (Digestion and Elimination) debuted the set in February 2018. Volume III (Endocrinology) will be published in fall 2018; Volumes IV (Neurology, Pyschiatry, and Pain Management) and V (Immunology, Orthopedics, and Otolarnyngology) will be published in spring 2019.
