Cancer staging is the process of determining the extent to which a cancer has developed by growing and spreading. Contemporary practice is to assign a number from I to IV to a cancer, with I being an isolated cancer and IV being a cancer that has spread to the limit of what the assessment measures.

This book will enable practicing physicians and trainees to learn, in a clinically relevant and intellectually stimulating way, guidelines for appropriate ordering of imaging exams. The new edition provides more than 460 clinical case scenarios, organized into subspecialty modules (breast, cardiac, thoracic, gastrointestinal, urologic, women's, pediatric, vascular, musculoskeletal, and neurologic imaging). Each scenario is presented as a quiz in which the reader is invited to select the best option from various imaging modalities. All choices are given ratings of appropriateness and is consistent with the American College of Radiology (ACR) Appropriateness Criteria. Furthermore, a brief solution to each case is included. Finally, over 500 radiologic images are included each associated with a clinical case to illustrate the diagnostic capabilities of the imaging exam. This second edition incorporates new content and revisions to remain consistent with the updated ACR Appropriateness Criteria since the original publication in 2012. It will be an ideal tool both for self-study and for quantitative evaluation of students' knowledge.

Owing to financial constraints, greater pressure is being put on physicians to order only appropriate radiologic exams. The American College of Radiology (ACR)

Appropriateness Criteria have emerged as a widely accepted standard by which the appropriate use of radiologic exams is judged. This book enables physicians and trainees to learn the ACR recommendations in a clinically relevant and intellectually stimulating way. More than 400 clinical scenarios are organized into ten modules based on organ systems. Each scenario is addressed by means of an interactive quiz in which the reader is invited to select the best option from various imaging modalities. Each choice is given a numerical rating of appropriateness, with accompanying comments when necessary. Correlative images of pathologies are included to enhance the reader's appreciation of the diagnostic power of the modality in question. This book is ideal as a tool both for self-study and for quantitative evaluation of students' knowledge.

The Clinician's Guide to Swallowing Fluoroscopy is a comprehensive resource for all dysphagia clinicians. This beautifully-illustrated text is intended for SLP, ENT, radiology, GI, and rehabilitation specialists interested in swallowing and addresses the need for an up-to-date, all-inclusive reference. Topics covered include radiation safety and protection, fluoroscopic oral, pharyngeal, and esophageal phase protocols and abnormalities, and objective measures of timing and displacement.

This book is intended to be used as a resource for people interested in or who are taking their prerequisite courses for becoming a Radiologic Technologist. There are many aspects to researching schools, the health care job market, and keys to success within the field of radiology. There are also many pitfalls like institutions that claim to qualify students to be able to work in a hospital as an x-ray tech after completion of their program, but do not meet accreditation standards needed to acquire the necessary credentials. This guide will provide everything the potential x-ray student needs to research accredited schools, be successful in a radiography program, and stand out among peers to gain a competitive edge when seeking a job after graduation.

Optimize diagnostic accuracy with Cardiovascular Imaging, a title in the popular Problem Solving in Radiology series. Drs. The only text to integrate the basics of radiology, characteristics and differences of testing modalities, and interpretation skills. This unique book fills a void in radiology interpretation texts by encompassing the foundational tools and concepts of the full range of medical imaging, including radiology, the basics of interpretation of plain radiographs, comparison with other testing modalities, the rationale for which to select as the first diagnostic step, and exploration and interpretation of chest, abdomen, extremity, and spinal radiographs. A concise, easy-to-use reference, it

includes written descriptions enhanced with figures, tables, and actual patient films to demonstrate concepts, and discusses—in easily accessible language--differences in testing modalities and interpretation of radiographs. The text features a step-by-step guide to interpretation. The resource describes and compares available diagnostic modalities, including plain radiograph, CT Scan, Nuclear Imaging, MRI, and Ultrasound. It discusses pediatric considerations and includes separate chapters for the chest, abdomen, upper and lower extremities, cervical spine, thoracic, and lumbar spine. The book will be an asset to nurse practitioners and Physician Assistants working in all Emergency, Urgent, Intensive, and Primary Care Settings. It will also benefit medical students and graduate students in acute care, family, adult/gerontology, and emergency nurse practitioner programs, as well as emergency/trauma clinical nurse specialists, and hospitalists and intensivist nurse practitioners. Key Features: Integrates the basics of radiology, CT Scans, Nuclear Imaging, MRIs, and Ultrasound, their characteristics and differences among testing modalities, and basic step-by-step interpretation skills Relevant to a wide range of nurse practitioners, physician assistants, and other mid-level providers in multiple settings Includes a step-by-step guide to the interpretation of the radiographs Delivers an easy-to-understand approach to selecting diagnostic imaging tests Presents actual images and figures to demonstrate concepts

A comprehensive, systemically organised 'film viewing' book designed specifically for FRCR candidates but equally useful to all trainee and junior radiologists as an 'aide memoire' and to medical undergraduates and MRCP candidates as a useful means of self-testing their level of knowledge. It is fully illustrated with high-quality, clearly labeled black and white illustrations throughout and the text closely mirrors the way that questions are asked in the FRCR film viewing examination, so as to provide as real an examination experience as possible. Each section of the book contains 20 representative questions, and model answers, providing 200 cases altogether.
