The four-volume set LNCS 2657, LNCS 2658, LNCS 2659, and LNCS 2660 constitutes the refereed proceedings of the Third International Conference on Computational Science, ICCS 2003, held concurrently in Melbourne, Australia and in St. Petersburg, Russia in June 2003. The four volumes present more than 460 reviewed contributed and invited papers and span the whole range of computational science, from foundational issues in computer science and algorithmic mathematics to advanced applications in virtually all application fields making use of computational techniques. These proceedings give a unique account of recent results in the field.

This book presents the refereed proceedings of the Second International Workshop on Applied Parallel Computing in Physics, Chemistry and Engineering Science, PARA'95, held in Lyngby, Denmark, in August 1995. The 60 revised full papers included have been contributed by physicists, chemists, and engineers, as well as by computer scientists and mathematicians, and document the successful cooperation of different scientific communities in the booming area of computational science and high performance computing. Many widely-used numerical algorithms and their applications on parallel computers are treated in detail.

The foundation of computational science is computational mathematics, and the general-purpose tools used to do computational mathematics are known as mathematical software. This book provides an overview of the latest research in these areas. It contains 19 contributions from 30 leading researchers who participated in the International Symposium for Computational Science held at Purdue University in May 1999. They gathered to celebrate the 65th birthday of Professor John R. Rice of Purdue University. Among the topics discussed are delivery mechanisms for numerical algorithms, intelligent systems for recommending scientific software. A retrospective of the first 50 years of mathematical software development is also included.

With breadth and depth of coverage, the Encyclopedia of Computer Science and Technology, Second Edition has a multi-disciplinary scope, drawing together comprehensive coverage of the inter-related aspects of computer science and technology. The topics covered in this encyclopedia include: General and reference Hardware Computer systems organization Networks Software and its engineering Theory of computation Mathematics of computing Information systems Security and privacy Human-centered computing Computing methodologies Applied computing Professional issues Leading figures in the history of computer science The encyclopedia is structured according to the ACM Computing Classification System (CCS), first published in 1988 but subsequently revised in 2012. This classification system is the most comprehensive and is considered the de facto ontological framework for the computing field. The encyclopedia brings together the information and historical context that students, practicing professionals, researchers, and academicians need to have a strong and solid foundation in all aspects of computer science and technology.

This book constitutes the refereed proceedings of the 8th International Workshop on Rewriting Logic and its Applications, WRLA 2010, held as a satellite event of ETAPS 2010, Paphos, Cyprus, in March 2010. The 13 revised full papers presented were carefully reviewed and selected from 29 submissions. The papers are organized in topical sections on termination and narrowing; tools; the K framework; applications and semantics; maude model checking and debugging; and rewrite engines.
