The right to development (RTD) seeks to address global inequities hidden in world politics and global institutions through the game of influences played by powerful actors. The negative impacts of the Atlantic slave trade, colonialism, and the subjugation of Africa through globalisation and its institutions are key factors that have caused Africa and African people claiming their RTD. This book examines how the African continent protects the right to development, examining the nature of the RTD and controversies surrounding it and how it is implemented. The book then goes onto explore the RTD at the regional level including through the jurisprudence of the African Commission and the African Court on Human Rights, at the sub-regional level including in sub-regional courts and tribunals, at the national levels through case studies and through the African Union governance institutions. Through this examination, the author unveils what are the prospects and challenges to the realisation of the RTD in Africa.

We revisit Lipset's law, which posits a positive and significant relationship between income and democracy. Using dynamic and heterogeneous panel data estimation techniques, we find a significant and negative relationship between income and democracy: higher/lower incomes per capita hinder/trigger democratization. Decomposing overall income per capita into its resource and non-resource components, we find that the coefficient on the latter is positive and significant while that on the former is significant but negative, indicating that the role of resource income is central to the result.

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work.As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

John Powell, with his special blend of insight and humor, guides us in discovering our capacity to give and receive love. By first learning to love and accept ourselves, we develop an inner sense of celebration and satisfaction that extends to our relationships with others. Powell explains how we can nurture and strengthen loving relationships through the "secret" of staying in love: Communication. He details the process of dialoguing in simple exercises that give us a new and deeper knowledge of ourselves and those we love. -- from back cover.

A young boy is worried about what will happen to his body when he hears such expressions as "I'm tongue-tied," "don't give me any of your lip," and "I put my foot in my mouth."

H.P. Garg Centre of Energy Studies Indian Institute of Technology Hauz Khas, New Delhi 110 016 India Heating of water using solar energy is not new and by using a little science and technology in it, the solar energy can be utilized more effectively and economically for heating the water both for domestic and industrial applications. Solar Water Heaters are popular for the last three decades in countries like USA, Australia, Israel, Japan, India. This is the only solar energy application which is commercially, technic ally and economically viable and has been studied for more than 30 years in many countries. Technical advances in solar water heating have been very rapid in the last 30 years. These are becoming popular not only for domestic use but for large establishments like hostels, hotels, hospitals, industries such as Textile, Paper and Food Processing and even in heating of swimming pools in winter. In few instances the cost of solar water heating systems may be higher than those operated by electricity, gas or other fuel but over a period of time this is more than recovered by the savings in the cost of operations and maintenance.
