well as various connections across mathematical domains. The book strives to preserve the spirit of discussion, and at times even argument, typical of collaborative work on a lesson plan. Based on the accumulated experience of work with future and current teachers, the book

assumes that students have some background in lesson planning, and extends their thinking further.

Specifically, this book aims to provide a discussion of how a lesson plan is constructed, including the ways in which problems are selected or invented, rather than the compilation

of prepared lesson plans. This approach reflects the authors' view that the process of searching for an answer is often more important than the formal result.

The book contains chapters of structured approach to problem
