This volume addresses the major "index cases" involving neonates that are taught in pediatric surgical training programs. The discussion emphasizes practical features of the diagnosis and management of these malformations. The intention is to help clinicians sculpt a creative adaptable approach that can be individualized for each child. The current approach is situated in its historical context to encourage ongoing advancement in the care of these patients. Contents: Perioperative Management of the Neonatal Patient "(Matias Bruzoni and Craig T Albanese)" Malrotation "(Jeremy Aidlen)" Congenital Duodenal Obstruction "(Chad E Hamner)" Jejunioileal Atresia and Stenosis "(Stephen E Dolgin)" Hirschsprung's Disease "(Meade Barlow, Nelson Rosen and Stephen E Dolgin)" Meconium Syndromes "(Ankur Rana and Stephen Dolgin)" Anorectal Malformations "(Meade Barlow, Nelson Rosen and Stephen E Dolgin)" Necrotizing Enterocolitis "(Loren Berman and R Lawrence Moss)" Esophageal Atresia "(Frederick Alexander)" Abdominal Wall Defects "(Benedict C Nwomeh)" Malformations of the Lung "(David H Rothstein)" Congenital Diaphragmatic Hernia "(Samuel Z Soffer)" Extra Hepatic Biliary Atresia "(Rebecka L Meyers and Erik G Pearson)" Ovarian Cysts "(Stephen E Dolgin)" Vascular and Lymphatic Anomalies "(Ann M Kulungowski and Steven J Fishman)" Sacrococcygeal Teratoma "(Richard D Glick)" Readership: Surgical residents and fellows training in pediatric surgery, pediatric surgeons, neonatologists, pediatricians and nurses involved in the care of newborns with surgical problems.

This book provides in-depth practical advice on how to manage children with endocrine conditions that may benefit from surgery. It is more detailed than general pediatric surgery texts and more surgically oriented than endocrinology texts. The first section is devoted to the thyroid and parathyroid, with detailed discussion of thyroid nodules, thyroid cancer, hyperthyroidism, hyperparathyroidism, and multiple endocrine neoplasia. The second section on the pancreas focuses on nesidioblastosis, islet cell transplantation, the surgical treatment of diabetes, and surgical complications of diabetes. Adrenal disorders are then discussed, followed by a section on the evaluation and management of ovarian and testicular torsion and tumors. The closing section addresses miscellaneous topics such as gynecomastia in boys and growth restriction surgery. This book will serve as an invaluable reference for all practitioners and trainees who care for children with

endocrine problems for which surgery is considered.

The foundation needed for the understanding and hence the treatment of a disease is a knowledge of the natural morphology and physiology of the affected organ and the system to which it belongs. In describing the anatomy of the pelvis and its organs in relation to medical practice, attention will be paid to defensive, reproductive, metabolic and excretory systems as well as to describing physical features and surgical approaches. The disposition of the pelvic organs in the body framework merits particular attention. The pelvis and its organs undergo considerable sexual differentiation, the functions of those with opening and closing mechanisms require training, and the pelvis is the keystone of the lower limbs and the spine. Disorders of pelvic organs cause distressing illnesses. Deliberate limitation of the scope of this volume excludes description of the anatomic foundations of pregnancy, childbirth and the puerperium. These will be dealt with in a separate volume. Not only are the anatomic foundations of medical practice the starting point of the account, they are also constantly kept in view. The illustrations and text combine to provide a visual synopsis. The illustrations are based on original dissections and are drawn true to scale as far as possible. No use has been made of special means of visualizing organs or their vasculature, such as roentgenography, computed tomography, arteriography, phlebography, lymphography and sonography. Technical standards change rapidly and individual findings inevitably receive overmuch attention. Relevant publications are named in the list of references.

With the in-depth coverage you need, this text helps you provide quality treatment for neonates, infants and pediatric patients. It discusses the principles of neonatal and pediatric respiratory care while emphasizing clinical application. Not only is this edition updated with the latest advances in perinatal and pediatric medicine, but it adds a new chapter on pediatric thoracic trauma plus new user-friendly features to simplify learning. A comprehensive approach covers all of the major topics of respiratory care for neonates, infants and children, including both theory and application Exam preparation is enhanced by the inclusion of the content in the exam matrix for the NBRC's neonatal/pediatric specialty exam. A streamlined, logical organization makes it easy to build a solid foundation of knowledge. Unique Pediatric Thoracic Trauma chapter focuses on common forms of thoracic trauma, a condition that accounts for 5-10% of admissions to pediatric trauma centers. Learning objectives at the beginning of each chapter highlight what you should learn by breaking down key content into measurable behaviors, criteria, and conditions. Assessment questions in each chapter are written in the NBRC multiple-choice style as found on the neonatal and pediatric specialty exam, with answers, page references, and rationales available on a companion Evolve website. Case studies help you master the more difficult areas of care for neonatal and
