This revised second edition highlights the opportunities for achieving cost savings and environmental improvements to enhance competitiveness in organizations of all sizes, with specific guidance for small businesses. The manual sets out effective and simple mechanisms to encourage participation and commitment from both staff and suppliers. It builds on the advice of the first edition, with a wide range of new case studies from different sectors, including retailers, hotels and hospitality, schools and

educational institutions, airports and prisons, and plenty of office-based examples. A new chapter on environmental reporting considers international developments in environmental management, reporting and sustainable business, including the Global Reporting Initiative and the European Environmental Reporting Awards, with a link to DETR guidance. An extended chapter on energy and utilities provides an update on environmental legislation, government position and industry trends. An office waste chapter looks at examples of successful waste exchanges that save disposal costs to donors and purchase costs to recipients.

Rapid technological advancements have the ability to positively or negatively impact corporate growth and success. Professional leaders and decision makers must consider such advancements when designing and implementing new policies in preparation for the sustainable future of the business environment. Developing Strategic Business Models and Competitive Advantage in the Digital Sector focuses on the application of preemptive planning in the media and entertainment industries to combat an increasingly uncertain future of innovation and competition. With research-based examples and analysis, this book is an essential reference source for academicians, researchers, and professionals interested in learning more about the impact of technology

on industry success, including the changes and challenges created by the Internet and electronic media.

Despite Mexico's implementation of a bilingual model in its tertiary education programmes, this book is the first contribution to knowledge regarding EMI in Mexico. The author introduces readers to the Mexican higher education context before providing detailed information regarding the technological and polytechnic subsystem, where EMI has been implemented since 2012. The volume details a pilot and case study conducted in Mexican universities as well as the research findings and conclusions. It closes with recommendations, as well as suggestions for further research. The book explores the implications for the continuous professional development and training for lecturers in the current shift to EMI in Bilingual, International, and Sustainable (BIS) universities. This volume will be of particular interest to researchers in EMI and bilingualism.

Peer-to-peer (P2P) networks – decentralized group structures allowing anyone to easily download and share resources online – already play a critical role in the distribution of

digital content. Most of the debate on P2P heretofore has focused on copyright issues. However, as the basis for legitimate business models a number of companies have already quietly embraced, P2P has a largely unknown and underestimated impact on taxation, with vast repercussions on the development of mature, profitable markets. This book analyses the current framing for digital and media supplies provided via P2P technologies through the lens of an interdisciplinary approach drawing on tax law, computer science, economics, copyright law, and business studies. VAT concepts such as those of economic activity and taxable person, taxable transactions, consideration, barter and taxable amount, and territoriality rules are discussed in connection with P2P, as is the evaluation of VAT liability for P2P operations in the presence of copyright infringement. Topics and issues considered include: - centralized and decentralized P2P networks; - free-riding problems; - identifying actors in P2P networks for VAT purposes; - P2P and place of supply; and - pros and cons of integrating P2P with taxation regimes and especially VAT systems. The analysis draws on a vast range of sources, including EU legislation and case law, tax law literature and doctrine, international conventions and treaties, Council of Europe and OECD documents, ECHR case law, and official documents and cases from key jurisdictions worldwide, offering

the first thoroughly grounded approach to overcoming the lack of understanding and awareness of ongoing changes currently separating the digital economy and traditional taxation systems, and a solid platform for discussion to the diverse communities of researchers and professionals interested in P2P.

Due to the competitive edge it confers on students, educational institutions, and non-English speaking nations in a globalized economy, English as a medium of instruction (EMI) has been gaining popularity in tertiary education in non-native English-speaking (NNES) countries. Institute-wide EMI implementation has often been imposed by top-down decisions, in combination with the optimistic view that the horse should always be placed before the cart. However, emerging evidence suggests that the delivery of such programs to NNES students has led to new pedagogical challenges and learning problems that go beyond the scope of language learning and teaching and deserve immediate attention. For example, how would an instructor respond to situations in which students' learning of content is compromised by their limited language proficiency? This book draws on the current practice of EMI in diverse disciplines and university settings and examines how these new pedagogical and learning issues can be addressed. The discussion also involves a reflection on the

essence of EMI in relation to the use of the first language (L1) as the medium of instruction in tertiary education. In addition, the book includes discussion about how to ensure and maintain the quality of EMI programs and assess the readiness of stakeholders for such programs, which include administrators, teachers, and students. The discussion is led by exemplars in Hong Kong and Taiwan, where the majority of students are native Chinese speakers, in the hope of developing critical perspectives and practical guidelines as references for EMI in other NNES settings. There is a growing body of research on English-medium Instruction (EMI) in Asian contexts, and much of this research points out difficulties experienced by stakeholders. This volume takes up the issue of support for EMI, which is, and which can be, offered to students outside of the classroom in order to help them succeed academically in an EMI environment. Dr Ruegg's book demonstrates the effectiveness of such support in the Japanese context. It begins by examining the support currently available for students in English-

medium full degree programmes then goes on to examine one successful support service in more detail in order to determine the kinds of effects that can be achieved by establishing such a centre. The research reported in this book was conducted in Japan, but the findings will apply in other locations, especially in other Asian countries. The information provided in the book is expected to inform institutions who are looking to either establish an English-medium degree programme or improve on an existing programme by sharing information about the practices of other institutions.
