Barcoding analysis and taxonomic revision of Goliathus ...

It has been mistakenly classified as a giant cockroach by some people, but it is a pure beetle, with a genus of its own, Titanus. It is a member of the Cerambycidae family, or “ longhorn beetles ” . Adults grow as long as 16.7 cm (6.5 in) and their mandibles are strong enough to snap a pencil in half, or cause damage to a person ’ s flesh. – Fact Zoo. I ’ ll admit, I ’ m scared of spiders and cockroaches, but I love beetles!

Baffling Beetles - Jay Snelling Art – Art by Jay Snelling

It is one of the largest species of the genus Goliathus, with a body length of 50 – 115 millimetres (2.0 – 4.5 in) in males and of 56 – 82 millimetres (2.2 – 3.2 in) in females. The body is broad and flat. Elytra are whitish with a complex pattern of black markings, and the pronotum (thoracic shield) has a large black longitudinal stripe.

Well, in this eBook you can admire through the art of Daniele Verucchi and his acrylic paintings the beauty of 50 beetles and 5 butterflies.

Presents a collection of gorgeous beetles, magnified multiple times their size and photographed in colour.

Accompanied by 21 color illustrations, this 19th-century book gives an overview of the native insects of New Zealand. Author George Vernon Hudson was an English-born entomologist and astronomer. Entomology was a life-long passion for Hudson; he completed this book at the age of 19, and when he died his collection of insects was the largest in the country.

This book provides stimulating and timely suggestions about expanding the world food supply to include a variety of minilivestock. It suggests a wide variety of small animals as nutritious food. These animals include arthropods (insects, earthworms, snails, frogs), and various rodents. The major advantage of minilivestock is that they do not have t
