This book serves as a technical yet practical risk management manual for professionals working with water and wastewater organizations. It provides readers with a functional comprehension of water and wastewater operations as well as a broad understanding of industry derivations and various stakeholder interconnectivity. This knowledge is imperative, as most administrative professionals are proficient in their respective areas of expertise but sometimes lack fluency on the broader technical aspects of their organization ' s purpose, operations, and externalities. It also examines risk management best practices and provides an actionable review of doing the right thing, the right way, every time through a combination of core risk management principles. These include enterprise, strategic, operational, and reputational risk management, as well as risk assessments, risk/frequency matrixes, checklists, rules, and decision-making processes. Finally, the book addresses the importance of risk transfer through insurance policies and provides best practices for the prudent selection of these policies across different scenarios. Features: Provides an understanding of water and wastewater technical operations to properly implement sound risk management and insurance programs. Emphasizes the importance of building well-designed, resilient systems, such as policies, processes, procedures, protocol, rules, and checklists that are up to date and fully implemented across a business. Offers a detailed look into insurance policy terms and conditions and includes practical checklists to assist readers in structuring and negotiating their own policies. Handbook of Risk and Insurance Strategies for Certified Public Risk Officers and Other Water Professionals combines practical knowledge of technical water/wastewater operations along with the core subjects of risk management and insurance for practicing and aspiring professionals charged with handling these vital tasks for their organizations. Readers will also gain invaluable perspective and knowledge on best-in-class risk management and insurance practices in the water and wastewater industries.

The Routledge Handbook of Public Aviation Law is the first book to incorporate a comprehensive analysis of Public Aviation Law – principally international, but also domestic law in a comparative context – in a single volume. International Law is pervasive in Aviation Law, and is incorporated into a number of major multilateral treaties (e.g., the Chicago Convention of 1944, for Public International Air Law). This is supplemented by various Annexes (promulgated by the International Civil Aviation Organization) and Conventions and Protocols (promulgated by States in diplomatic conferences). States then implement these international obligations in domestic laws that create aviation regulatory administrations that, in turn, promulgate regulations. Bringing together leading scholars in the field, this prestigious reference work provides a comprehensive and comparative overview of Public Aviation Law. It surveys the state of the discipline including contemporary and emerging areas of law, regulation, and public policy in air transportation. Each chapter begins with an overview of the international law applicable to the subject matter, followed, where appropriate, by a comparative examination of domestic statutes, regulations, and jurisprudence. The objective of the book is to identify and summarize existing areas within the context of international research, and to identify and highlight emerging areas. Both practical and theoretical in scope, the Routledge Handbook of Public Aviation Law will be of great relevance to scholars, researchers, lawyers, and policy makers with an interest in aviation law.

It has taken China 15 long years of tough negotiations to achieve accession to the World Trade Organization (WTO). By becoming a full member of the WTO, China has in fact made three tiers of commitments. The first tier is the commitment to the objectives of the WTO, such as free trade, most-favoured nations, national treatment and transparency, as expounded in the various documents setting up the organization and its predecessor, the GATT. The second tier is the commitment to the set of rules governing trade for specific sectors, such as agricultural and textile goods, or information technology and telecommunications. This is set out in China's accession protocol. The third tier is the commitment to bilateral agreements which China signed with her major trading partners. Their support is mandatory before China can be admitted to the WTO and therefore she has to satisfy each of them through elaborate bilateral negotiations. This handbook highlights the important commitments that China has made to the international community and analyzes the potential impact of such commitments on China.Part I of the book outlines China's commitments to convert her economy from a centrally planned one to a free market one as far as cross-border movement of goods, services and personnel is concerned. It reproduces China's commitments in a tabular format to facilitate reading, and is supplemented with brief references to WTO regulations where appropriate so that readers get to know how China's commitments relate to WTO obligations. Part II examines the impacts of China's WTO membership as a whole and on her specific economic sectors. Part III consists of Tables and Figures selected from a Report compiled by the US General Accounting Office, presenting some of the Office's analysis and findings of China's commitments on WTO accession.Appendix 1 lists all the legal instruments pertaining to China's accession to the WTO. Appendix 2 reprints the Protocol of China's Accession. China's schedule of commitments on services, rearranged in a format more comprehensible to the general reader, is included as Appendix 3, so that concerned readers can find out for themselves how their professions may be affected. Appendix 4 reprints the GATS Services Sectoral Classification GNS/W/120 and part of the CPC Provisional version. This appendix is attached to facilitate readers to check whether their specific professions, which are spelt out in 3?6 digit codes, are included in Chinese commitments.

Ponce's Primer Handbook for Quality Life Maximization By: John E. Richardson Recently retired and enjoying increased personal time, Ponce reflected on the reasons so many of his contemporaries had either passed away, or were experiencing less than the " golden years " they had expected. Ponce (the surrogate narrator that author John E. Richardson created to present the primer, based upon his own his life experiences) organized his observations and conclusions into this handbook, to assist individuals - of all ages – to successfully navigate through the obstacles they will encounter in pursuing quality life experiences... and maximizing them.

Electronic business is a major force shaping the digital world. Yet, despite of years of research and standardization efforts, many problems persist that prevent e-business from achieving its full potential. Problems arise from different data vocabularies, classification schemas, document names, structures, exchange formats and their varying roles in business processes. Non-standardized business terminology, lack of common acceptable and understandable processes (grammar), and lack of common dialog rules (protocols) create barriers to improving electronic business processes. Handbook of Research on E-Business Standards and Protocols: Documents, Data and Advanced Web Technologies contains an overview of new achievements in the field of e-business standards and protocols, offers in-depth analysis of and research on the development and deployment of cutting-edge applications, and provides insight into future trends. This book unites new research that promotes harmony and agreement in business processes and attempts to choreograph business protocols and orchestrate semantic alignment between their vocabularies and grammar. Additionally, this Handbook of Research discusses new approaches to improving standards and protocols, which include the use of intelligent agents and Semantic Web technology.
