Land Use Law in Florida presents an in-depth analysis of land use law common to many states across the United States, using Florida cases and statutes as examples. Florida case law is an important course of study for planners, as the state has its own legal framework that governs how people may use land, with regulation that has evolved to include state-directed urban and regional planning. The book addresses issues in a case format, including planning, land development regulation, property rights, real estate development and land use, transportation, and environmental regulation. Each chapter summarizes the rules that a reader should draw from the cases, making it useful as a reference for practicing professionals and as a teaching tool for planning students who do not have experience in reading law. This text is invaluable for attorneys; professional planners; environmental, property rights, and neighborhood activists; and local government employees who need to understand the rules that govern how property owners may use land in Florida and around the country.

A groundbreaking book about the nineteenth century obsession with hysteria.

Lithium for Medea is as much a tale of addiction—to sex, drugs, and dysfunctional family chains—as it is one of mothers and daughters, their mutual rebellion and unconscious mimicry. Here is the story according to Rose—the daughter of a narcissistic, emotionally crippled mother and a father who shadowboxes with death in hospital corridors—as she slips deeply and dangerously into the lair of a cocaine-fed artist in the bohemian squalor of Venice. Lithium for Medea sears us with Rose's breathless, fierce, visceral flight—like a drug that leaves one's perceptions forever altered.

This case study describes the role an applied anthropologist takes to help Marshallese communities understand the impact of radiation exposure on the environment and themselves, and addresses problems stemming from the U.S. nuclear weapons testing program conducted in the Marshall Islands from 1946-1958. The author demonstrates how the U.S. Government limits its responsibilities for dealing with the problems it created in the Marshall Islands. Through archival, life history, and ethnographic research, the author constructs a compelling history of the testing program from a Marshallese perspective. For more than five decades, the Marshallese have experienced the effects of the weapons testing program on their health and their environment. This book amplifies the voice of the Marshallese who share their knowledge about illnesses, premature deaths, and exile from their homelands. The author uses linguistic analysis to show how the Marshallese developed a unique radiation language to discuss problems related to their radiation exposure problems that never existed before the testing program. Drawing on her own experiences working with the government of the Marshall Islands, the author emphasizes the role of an applied anthropologist in influencing policy, and empowering community leaders to seek meaningful remedies.
