The engineering enterprise is a pillar of U.S. national and homeland security, economic vitality, and innovation. But many engineering tasks can now be performed anywhere in the world. The emergence of "offshoring"- the transfer of work from the United States to affiliated and unaffiliated entities abroad - has raised concerns about the impacts of globalization. The Offshoring of Engineering helps to answer many questions about the scope, composition, and motivation for offshoring and considers the implications for the future of U.S. engineering practice, labor markets, education, and research. This book examines trends and impacts from a broad perspective and in six specific industries - software, semiconductors, personal computer manufacturing, construction engineering and services, automobiles, and pharmaceuticals. The Offshoring of Engineering will be of great interest to engineers, engineering professors and deans, and policy makers, as well as people outside the engineering community who are concerned with sustaining and strengthening U.S. engineering capabilities in support of homeland security, economic vitality, and innovation.

With Chinese-led initiatives such as One Belt One Road (OBOR) and the Asian Infrastructure Investment Bank (AIIB) combined with uncertainty due to US shifts in policy and apparent commitments over the past decade, the stakes are high for companies looking to profit from the world ' s newest superpower. Post-financial crisis, China has emerged as the largest or second largest trading partner for most countries. It has become the second largest market for Fortune 500 companies like Starbucks, Apple, and Nike and drives growth for Hollywood and commodity products. Yet the profits come at a price for countries and companies alike—they must adhere to the political goals of Beijing or else face economic punishment or outright banishment. Using primary research from interviews with hundreds of business executives and government officials, The War for China ' s Wallet will help companies understand how to profit from China ' s outbound economic plans as well as a shifting consumer base that is increasingly nationalistic. The countries and companies that get it right will benefit from China ' s wallet but those that do not will lose out to the world ' s largest growth engine for the next two decades.
