Long unavailable in hardcover, this edition of *The Lover* includes a new introduction by Maxine Hong Kingston that looks back at Duras's world from an intriguing new perspective--that of a visitor to Vietnam today.

This book is an up to date compendium on the biology and molecular pathogenesis of lymphomas, which represent malignant cancers of the lymphoid system. With its focus on the biology and genetic basis of these diseases, the book is of interest to basic scientists, biologists, clinical hematologists and pathologists as well as medical students. Different chapters will cover all major lymphoma subtypes, as well as chronic lymphocytic leukemia and selected less common lymphoma entities such as T-cell lymphomas and central nervous system lymphomas.

This comprehensive and authoritative reference covers all aspects of the group of disorders collectively known as the lymphoid neoplasms. The reader is taken through a description of its normal cellular origins and the molecular genetic abnormalities that can lead to this group of conditions, a section of the book that has been considerably strengthened for this third edition, to the environmental factors that may be relevant to disease development, and, finally, to the pragmatic aspects of disease management. The authors synthesise for the reader aspects of current knowledge and likely future developments, and direct them to the appropriate resources should they wish to pursue particular avenues of scientific or literature research.
