The Business and Human Rights Journal (BHRJ) provides an authoritative platform for scholarly debate on all issues concerning the intersection of business and human rights in an open, critical and interdisciplinary manner.

The intersection of business and human rights contains substantial economic, social, and political implications. Global business enterprises and civil society groups must establish a constructive and meaningful dialogue in order to work cooperatively t

In a global economy, multinational companies often operate in jurisdictions where governments are either unable or unwilling to uphold even the basic human rights of their citizens. The expectation that companies respect human rights in their own operations and in their business relationships is now a business reality that corporations need to respond to. Business and Human Rights: From Principles to Practice is the first comprehensive and interdisciplinary textbook that addresses these issues. It examines the regulatory framework that grounds the business and human rights debate and highlights the business and legal challenges faced by companies and stakeholders in improving respect for human rights, exploring such topics as: the regulatory framework that grounds the business and human rights debate challenges faced by companies and stakeholders in improving human rights industry-specific human rights standards current mechanisms to hold corporations to account future challenges for business and human rights With supporting case studies throughout, this text provides an overview of current themes in the field and guidance on practical implementation, demonstrating that a thorough understanding of the human rights challenges faced by business is now vital in any business context.

Business corporations can and do violate human rights all over the world, and they are often not held to account. Emblematic cases and situations such as the state of the Niger Delta and the collapse of the Rana Plaza factory are examples of corporate human rights abuses which are not adequately prevented and remedied. Business and human rights as a field seeks to enhance the accountability of business – companies and businesspeople – in the human rights area, or, to phrase it differently, to bridge the accountability gap. Bridging the accountability gap is to be understood as both setting standards and holding corporations and businesspeople to account if violations occur. Adopting a legal perspective, this book presents the ways in which this dual undertaking has been and could be further carried out in the future, and evaluates the extent to which the various initiatives in the field bridge the corporate accountability gap. It looks at the historical background of the field of business and human rights, and examines salient periods, events and cases. The book then goes on to explore the relevance of international human rights law and international criminal law for global business. International soft law and policy initiatives which have blossomed in recent years are evaluated along with private modes of regulation. The book also examines how domestic law, especially the domestic law of multinational companies' home countries, can be used to prevent and redress corporate related human rights violations.

This book is about corporate social responsibility and business & human rights. It discusses international law and how the emerging litigation thereof.-

The regulation of business in the global economy poses one of the main challenges for governance, as illustrated by the dynamic scholarly and policy debates about the UN Guiding Principles on Business and Human Rights and a possible international treaty on the matter. This book takes on the conceptual and legal underpinnings of global governance approaches to business and human rights, with an emphasis on the Guiding Principles (GPs) and attention to the current treaty process. Analyses of the GPs have tended to focus on their static dimension, such as the standards they include, rather than on their capacity to change, to push the development of new norms, and practices that might go beyond the initial content of the GPs and improve corporate compliance with human rights. This book engages both the static and dynamic dimensions of the GPs, and considers the issue through the eyes of scholars and practitioners from different parts of the world.

An innovative textbook setting out a systematic approach to business and human rights.

The spotlight of global scrutiny has shone particularly brightly on corporations' adverse impacts on human rights in recent years. Corporations make up more than two-thirds of the world's top economies today, and so rightly they are being called to account for their impacts on society and the communities in which they operate. The Business of Human Rights demystifies the relevance of human rights for business, explaining how the corporate responsibility to respect human rights under the UN Guiding Principles can be implemented in practice. It provides a straightforward, practical guide that can be easily read and interpreted by managers to help businesses navigate this complex area of legislation and "soft" law to fulfil their responsibilities. It explains the potential legal, financial and reputational implications for corporations and the steps they need to take to address them. The book tracks some of the major global developments in business and human rights, including the emergence of foreign, transnational, and international law and the proliferation of multi-stakeholder initiatives on business and human rights. Case studies from a range of sectors and industries – such as extractives, apparel, fast-moving consumer goods, electronics, and banking and finance – illustrate the enormous risks and opportunities human rights pose for business in practice. The Business of Human Rights will equip corporate executives, sustainability practitioners, academics, students, and anyone interested in business's impacts on society with the essential information and tools they need to quickly come up to speed with the rapidly evolving area of business and human rights.

The relationship between business and human rights has emerged in the last two decades as one of the most pressing issues in the field of business ethics. Do corporations have human rights responsibilities? If so, what is that nature of those responsibilities and do they differ in any significant way from those of governments? Is it reasonable or realistic to expect corporations to respect human rights in environments where governments, particularly in the developing and underdeveloped world, need economic development and have a limited capacity and/or interest in enforcing human rights standards and laws? The contributors to this groundbreaking volume take up these questions, examining them from both theoretical and practical perspectives. Topics discussed include the debates leading to the creation of the ISO 26000 standard and the United Nations human rights framework for business entities, as well as the nature and limits of the human rights responsibilities of business, the roles and responsibilities of international trade bodies like the World Trade Organization in protecting human rights, and the implications of the current debate for international trade agreements and trade with China. The contributors also explore the effectiveness of voluntary human rights standards in the textile and clothing trade, mining, advertising and the pharmaceutical industry. Scholars and students in management, philosophy, political science, sociology and law will find this volume a great resource, as will activists, managers and policy makers.

Legal Sources in Business and Human Rights takes stock of different aspects of Business and Human Rights practice in order to identify and explore some dynamics that are driving the evolution of the legal sources of international and EU law in the field of B&HRs.

Transnational business activities are important drivers for developing and the least developed countries. However, they can also negatively impact the enjoyment of human rights. In some cases, multinational enterprises (MNEs) have even been accused of grave human rights abuses in the territory of the states where their subsidiaries operate. Since the parent companies of many MNEs are incorporated under the law of European states, those countries' domestic law and the European legal framework play a crucial role in establishing how their activities should be conducted – also throughout their supply chains – and which remedies will be available when corporate human rights violations occur. In recent years, the European Union, the Council of Europe and their Member States have been adopting policies and legislation to ensure respect for human rights by businesses and have developed a body of related case law. These legal instruments can be considered the European responses to the challenges posed at international-law level, and they constitute the focus of research of this book. Through its collected chapters – written by scholars and practitioners under the direction of the editor, Angelica Bonfanti – the book identifies the European solutions to the business and human rights international legal issues, provides an overall assessment of their effectiveness, and examines their potential evolution.
