Process engineering emerged at the beginning of the 20th Century and has become an essential scientific discipline for the matter and energy processing industries. Its success is incontrovertible, with the exponential increase in techniques and innovations. Rapid advances in new technologies such as artificial intelligence, as well as current societal needs – sustainable development, climate change, renewable energy, the environment – are developments that must be taken into account in industrial renewal. Process Engineering Renewal 1 – the first volume of three – focuses on training, demonstrating the need for innovation in order for the field to have a framework

that is sustainable, in a highly changeable world.

Published in 1901, this book provides an English and French version of the 1303 text by Robert Manning of Brunne. Handlyng Synne was adapted from an Anglo-Norman work attributed to William of Waddington, the Manuel de Pechiez. It consists of more than 12,000 lines of verse, arranged in four-stress couplets. It is a discussion of the ten commandments, the seven deadly sins, the seven sacraments, and the elements of confession, illustrated throughout by exempla, or moral anecdotes, thirteen of which do not appear in the Manuel. Handlyng Synne has been described as "a reduction of the world's experience to a comprehensive moral scheme"

In 1942, the dictatorial regime of occupied France held a show trial that didn't work. In a society from which democratic checks and balances had been eliminated, under a regime that made its own laws to try its opponents, the government's signature legal initiative – a court packed with sympathetic magistrates and soldiers whose investigation of the defunct republic's leaders was supposed to demonstrate the superiority of the new regime – somehow not only failed to result in a conviction, but, in spite of the fact that only government-selected journalists were allowed to attend, turned into a

podium for the regime's most bitter opponents. The public relations disaster was so great that the government was ultimately forced to cancel the trial. This catastrophic would-be show trial was not forced upon the regime by Germans unfamiliar with the state of domestic opinion; rather, it was a home-grown initiative whose results disgusted not only the French, but also the occupiers. This book offers a new explanation for the failure of the Riom Trial: that it was the result of ideas about the law that were deeply imbedded in the culture of the regime's supporters. They genuinely believed that their opponents had been playing politics with the nation's interests, whereas their own concerns were apolitical. The ultimate lesson of the Riom Trial is that the abnegation of politics can produce results almost as bad as a deliberate commitment to stamping out the beliefs of others. Today, politicians on both sides of the political spectrum denounce excessive polarization as the cause of political gridlock; but this may simply be what real democracy looks like when it seeks to express the wishes of a divided people.

Greenberg and Judy LoBianco, veteran leaders in the field with decades of successful administration experience, head a sterling list of contributors who have taught at the elementary, middle school, high school, and college levels in urban, suburban, and rural settings. Together, these contributors expound on the roles and responsibilities of physical education administrators through both theoretical and practical lenses. The result is a book that will be highly useful to undergraduate students looking to enter the field, as well as a resource for administrators in physical education leadership positions who are looking to acquire new skills and innovative ideas in each of the five areas of responsibility covered in the book. Part I covers leadership, organization, and planning. It explores leadership and management styles and presents practical theories of motivation, development, and planning. It also looks at how to plan for the essential components of an effective, quality physical education program. In part II, readers examine various curriculum and instruction models and navigate through curriculum theory and mapping. This section also offers guidance on planning events, including special programs and fundraising projects, and how to build a team and secure community connections for those special events. Part III helps administrators plan and design new school sites or renovate existing ones, and it presents contemporary

concepts in universal design and sustainable environmental design. It also offers ideas on how to incorporate technology to meet the needs of 21st-century learners, including the use of social media and robotics in delivering instruction and communication. Part IV explores written, verbal, and electronic communication issues, as well as legal and human resource issues. Administrators learn how to lobby and advocate for physical education, how the legal system affects schools, and how to examine personnel issues, bullying, and harassment. Part V explains the fiscal responsibilities inherent in administrative positions, including budgeting, bidding, and purchasing. It also shows how administrators can secure funding independent of district or local funding, offering many examples of grants and fundraising opportunities with sample grant applications. Throughout the text, special features—Advice From the Field and Leadership in Action—share tips, nuggets of wisdom, and examples of administrators excelling in their various responsibilities. The book also comes with many practical examples of forms that are useful in carrying out responsibilities, and each chapter offers objectives, a list of key concepts, and review questions to facilitate the learning. In addition, the text comes with a web resource of supportive materials and documents. Organization and Administration of Physical Education: Theory and Practice, published with SHAPE
