This Environmental Health Criteria (EHC) series publication addresses dermal exposure to chemicals. It describes sources and pathways of dermal exposure, models and tools to estimate dermal exposure and methods for dermal exposure prevention and reduction. Furthermore, the EHC introduces skin diseases associated with dermal exposure. This EHC aims to provide information to national regulatory authorities to assist in conducting health risk assessments and managing the risk involving dermal exposure to chemicals.

An action-packed series-starter perfect for fans of *The Heroine Complex* and *Not Your Sidekick*. "I didn't know how much I needed this brave, thrilling book until it rocked my world. *Dreadnought* is the superhero adventure we all need right now." Charlie Jane Anders, author of *All the Birds in the Sky*
Danny Tozer has a problem: she just inherited the powers of *Dreadnought*, the world's greatest superhero. Until *Dreadnought* fell out of the sky and died right in front of her, Danny was trying to keep people from finding out she's transgender. But before he expired, *Dreadnought* passed his mantle to her, and those secondhand superpowers transformed Danny's body into what she's always thought it should be. Now there's no hiding that she's a girl. It should be the happiest time of her life, but Danny's first weeks finally living in a body that fits her are more difficult and complicated than she could have imagined. Between her father's dangerous obsession with "curing" her girlhood, her best friend suddenly acting like he's entitled to date her, and her fellow superheroes arguing over her place in their ranks, Danny feels like she's in over her head. She doesn't have time to adjust. *Dreadnought's* murderer—a cyborg named *Utopia*—still haunts the streets of New Port City, threatening destruction. If Danny can't sort through the confusion of coming out, master her powers, and stop *Utopia* in time, humanity faces extinction.

Adopting a multi-disciplinary approach and using the case of the automotive industry as a starting point this volume discusses how industrial companies can remain competitive in spite of the current economic downturn.

First in the YA bestselling fantasy trilogy of the battle between Light and Dark. "If you loved the Twilight series, you will love this book." Giuliana Rancic, E! News anchor Caroline Ellis' sixteenth birthday sets into motion a series of events that have been fated for centuries. A descendant of Virginia Dare, the first child born in the lost colony of Roanoke, and unaware of her birthright as the heir to the throne of the Light Fae, it isn't until Caroline begins a tumultuous relationship with Devilyn Reilly that the truth of her heritage is revealed. Devilyn is the only Fae who is both of the Light and of the Dark, and struggles to maintain that precarious balance to avoid succumbing to the power of the Dark within him. He is the only one who can save Caroline from those who would destroy her and destroy all hope for unity among the Fae. He promises Caroline that he will protect her at all costs, even when it means protecting her from himself. Told from the alternating perspectives of Caroline and Devilyn, Fae draws on mysteries, myths and legends to create a world, and a romance, dangerously poised between Light and Dark. Praise for the Fae trilogy "A phenomenal series." Margaret Stohl, #1 New York Times bestselling coauthor of Jo & Laurie "Lovers you must buy a copy!" Nicky Whelan, actress, Hall Pass, Franklin & Bash "Since the Twilight series recently came to an end, the search for the next hit teen novel is on. Fortunately, with C.J. Abedi's first book in the Fae series, there may be no need to look any further." Firsttoknow.com

The Global Geodetic Observing System (GGOS) has been established by the International Association of Geodesy (IAG) in order to integrate the three fundamental areas of geodesy, so as to monitor geodetic parameters and their temporal variations, in a global reference frame with a target relative accuracy of 10 or better. These areas, often called "pillars", deal with the determination and evolution of (a) the Earth's geometry (topography, bathymetry, ice surface, sea level), (b) the Earth's rotation and orientation (polar motion, rotation rate, nutation, etc.), and (c) the Earth's gravity field (gravity, geoid). Therefore, Earth Observation on a global scale is at the heart of GGOS's activities, which contributes to Global Change - search through the monitoring, as well as the modeling, of dynamic Earth processes such as, for example, mass and angular momentum exchanges, mass transport and ocean circulation, and changes in sea, land and ice surfaces. To achieve such an ambitious goal, GGOS relies on an integrated network of current and future terrestrial, airborne and satellite systems and technologies. These include: various positioning, navigation, remote sensing and dedicated gravity and altimetry satellite missions; global ground networks of VLBI, SLR, DORIS, GNSS and absolute and relative gravity stations; and airborne gravity, mapping and remote sensing systems.

<http://dx.doi.org/10.12946/gplh6><http://www.epubli.de/shop/buch/53894>"The spatiotemporal conjunction is a fundamental aspect of the juridical reflection on the historicity of law. Despite the fact that it seems to represent an issue directly connected with the question of where legal history is heading today, it still has not been the object of a focused inquiry. Against this background, the book's proposal consists in rethinking key confluences related to this problem in order to provide coordinates for a collective understanding and dialogue. The aim of this volume, however, is not to offer abstract methodological considerations, but rather to rely both on concrete studies, out of which a reflection on this conjunction emerges, as well as on the reconstruction of certain research lines featuring a spatiotemporal component. This analytical approach makes a contribution by providing some suggestions for the employment of space and time as coordinates for legal history. Indeed, contrary to those historiographical attitudes reflecting a monistic conception of space and time (as well as a Eurocentric approach), the book emphasises the need for a delocalized global perspective. In general terms, the essays collected in this book intend to take into account the multiplicity of the spatiotemporal confines, the flexibility of those instruments that serve to create chronologies and scenarios, as well as certain processes of adaptation of law to different times and into different spaces. The spatiotemporal dynamism enables historians not only to detect new perspectives and dimensions in foregone themes, but also to achieve new and compelling interpretations of legal

history. As far as the relationship between space and law is concerned, the book analyses experiences in which space operates as a determining factor of law, e.g. in terms of a field of action for law. Moreover, it outlines the attempted scales of spatiality in order to develop legal historical research. With reference to the connection between time and law, the volume sketches the possibility of considering the factor of time, not just as a descriptive tool, but as an ascriptive moment (quasi an inner feature) of a legal problem, thus making it possible to appreciate the synchronic aspects of the "juridical experience". As a whole, the volume aims to present spatiotemporality as a challenge for legal history. Indeed, reassessing the value of the spatiotemporal coordinates for legal history implies thinking through both the thematic and methodological boundaries of the discipline."

This book, based on authoritative sources and reports, links environmental communication to different fields of competence: environment, sustainability, journalism, mass media, architecture, design, art, green and circular economy, public administration, big event management and legal language. The manual offers a new, scientifically based perspective, and adopts a theoretical-practical approach, providing readers with qualified best practices, case studies and 22 exclusive interviews with professionals. A fluent style of writing leads the readers through specific details, enriching their knowledge without being boring. As such it is an excellent preparatory and interdisciplinary academic tool intended for university students, scholars, professionals, and anyone who would like to know more on the matter.

The book presents " based on the most recent research and development results worldwide - the perspectives of new propulsion concepts such as electric cars with batteries and fuel cells, and furthermore plug in hybrids with conventional and alternative fuels. The propulsion concepts are evaluated based on specific power, torque characteristic, acceleration behaviour, specific fuel consumption and pollutant emissions. The alternative fuels are discussed in terms of availability, production, technical complexity of the storage on board, costs, safety and infrastructure. The book presents summarized data about vehicles with electric and hybrid propulsion. The propulsion of future cars will be marked by diversity " from compact electric city cars and range extender vehicles for suburban and rural areas up to hybrid or plug in SUV "s, Pick up "s and luxury class automobiles.

Cyber norms and other ways to regulate responsible state behavior in cyberspace is a fast-moving political and diplomatic field. The academic study of these processes is varied and interdisciplinary, but much of the literature has been organized according to discipline. Seeking to cross disciplinary boundaries, this timely book brings together researchers in fields ranging from international law, international relations, and political science to business studies and philosophy to explore the theme of responsible state behavior in cyberspace. . Divided into three parts, *Governing Cyberspace* first looks at current debates in and about international law and diplomacy in cyberspace. How does international law regulate state behaviour and what are its limits? How do cyber superpowers like China and Russia shape their foreign policy in relation to cyberspace? The second focuses on power and governance. What is the role for international organisations like NATO or for substate actors like intelligence agencies? How do they adapt to the realities of cyberspace and digital conflict? How does the classic balance of power play out in cyberspace and how do different states position themselves? The third part takes a critical look at multistakeholder and corporate diplomacy. How do global tech companies shape their role as norm entrepreneurs in cyberspace, and how do their cyber diplomatic efforts relate to their corporate identity?
