Jerome Bruner shows that the basic concepts of science and the humanities can be grasped intuitively at a very early age. Bruner's foundational case for the spiral curriculum has influenced a generation of educators and will continue to be a source of insight into the goals and methods of the educational process.

This physical education curriculum guide for kindergarten through twelfth grade has two main components. The first is a program overview that includes information relating to program organization and implementation for early, middle, and senior grades. The second section contains suggested activities and teaching notes for realizing specific program objectives. The overall goals are that students should: (1) develop physical wellbeing; (2) develop desired movement patterns through the neuromuscular system; (3) express ideas, thoughts, and feelings with confidence through physical activity; (4) develop independence in pursuing physical activity throughout life; (5) develop safety and survival practices; and (6) develop positive social interactions through a variety of physical activities. These goals remain constant throughout the entire program, although the objectives which prepare students to reach the goals vary according to stages of maturation and learning. Developmental characteristics, time allotments, lesson plans, activities, class organization, and evaluation methods are outlined for early, middle, and senior grades. Appendixes contain an equipment list, a safety checklist, a sample lesson plan, a discussion of legal liability, and a bibliography. (JD)

Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

This panorama is a pictorial view of music instruments starting with older bamboo and other instruments of undetermined age, going on two types of gongs-flat in Northern Luzon and bossed in the South. These two areas may be viewed as pocket cultures comparable to other pocket cultures in Borneo, Sumatra, other islands in Southeast Asia and the mountain regions south of and including Yunnan province of China, thus placing the music of Luzon and Mindanao in a larger geographical context. For example, mouth organs in Borneo and continental Southeast Asia are absent in the Philippines, where, however, separate pipes of panpipes are on occasion still being played by groups of boys among the Kalingga of Luzon. The musical elements of drone and melody identified in two lutes in Borneo or ensembles in Yunnan find examples in two players of the same tube zither in Mindanao and flat gongs in Luzon. The nearly 500 photographs in the book are almost all taken in the field, showing details of making and playing bamboo buzzers, jaw harps, zithers, percussion tubes, flutes and other instruments. Manners of tapping and sliding with the hands on flat gongs differ from beating them with sticks. Examples of big bossed gongs with wide rims (agung) struck with a mallet on the boss and a stick on the rim show affinities with a manner of playing bronze drums in Yunnan. In North Luzon, men and women dancing in circles with outstretched hands distinguish them from solo dancers with minimum body movements in the South.

Essayists Amada Cruz, Elizabeth A. T. Smith, and Amelia Jones offer keen insight and observations from several distinct vantage points, demonstrating that Sherman's work is a lens through which to view contemporary art and its ongoing concern with the profound issues of the structures of the self.

The Mental Health & High School Curriculum Guide (Version 3) is an updated and revised version of the original edition. This comprehensive curriculum guide provides six modules that can be used together or separately in High School classrooms to enhance mental health literacy.
