Chest & Abdominal Anatomy Structures self-test is dedicated for medical students to learn anatomy. It is the most effective way to study the structure and functions of neuroanatomy & anatomy and physiology. Book is designed for convenient self-testing. More than just a coloring book, this unique learning tool offers: 1.chest structures 2. anatomy of the cheart 3.lungs & bronchus 4.abdomen structures 5.liver & stomach & spleen □ 67 pages 8,5" x 11" □ Professionally designed soft matte cover □ Pinned with a durable matte finish. Protects against scratches and scuffs □ Best gift idea for medical students Look at our products for other Anatomy Structures self-tests, notebooks and medical planners by clicking on the author name □□□

Leading clinical and basic science researchers present the latest molecular and cellular findings on key gut peptides, illuminating their physiology and pathophysiology, as well as highlighting the regulatory mechanisms underlying their action in the intestinal tract. The book focuses on gut peptide physiology and receptor pharmacology, gut processing and receptor biology, and on regulatory mechanisms in the gut, including pancreatic feedback mechanisms. Also included are chapters on the trophic effects of gut peptides on GI and pancreatic cancer; the regulation of gut peptide gene expression; and gastric secretion, especially in diseased states.

One hundred stereotype maps glazed with the most exquisite human prejudice, especially collected for you by Yanko Tsvetkov, author of the viral Mapping Stereotypes project. Satire and cartography rarely come in a single package but in the Atlas of Prejudice they successfully blend in a work of art that is both funny and thought-provoking. The book is based on Mapping Stereotypes, Yanko Tsvetkov's critically acclaimed project that became a viral Internet sensation in 2009. A reliable weapon against bigots of all kinds, it serves as an inexhaustible source of much needed argumentation and-occasionally-as a nice slab of paper that can be used to smack them across the face whenever reasoning becomes utterly impossible. The Complete Collection version of the Atlas contains all maps from the previously published two volumes and adds twenty five new ones, wrapping the best-selling series in a single extended edition.

Comprehensive Human Physiology is a significantly important publication on physiology, presenting state-of-the-art knowledge about both the molecular mechanisms and the integrative regulation of body functions. This is the first time that such a broad range of perspectives on physiology have been combined to provide a unified overview of the field. This groundbreaking two-volume set reveals human physiology to be a highly dynamic science rooted in the ever-continuing process of learning more about life. Each chapter contains a wealth of original data, clear illustrations, and extensive references, making this a valuable and easy-to-use reference. This is the quintessential reference work in the fields of physiology and pathophysiology, essential reading for researchers, lecturers and advanced students.

In recent years functional gastrointestinal disorders have attracted much interest. These disorders are extremely common. They are characterized by symptoms and the lack of structural lesions that can be identified with clinically available routine diagnostic tests. Several functional abnormalities are now believed to play a role in the development of the symptoms. This book summarizes the presentations at the International Falk Symposium No. 99 'Functional Dyspepsia and Irritable Bowel Syndrome: Concepts and Controversies' that took place on May 27-28, 1997. This symposium brought together clinical and basic researchers and clinicians to improve interdisciplinary communication. The meeting comprehensively

covered basic and clinical aspects of these disorders, and it not only summarized the current knowledge, but also identified scientific questions that need to be addressed in the future.

Aging of the Autonomic Nervous System is the first book devoted to the aging of the autonomic nervous system. The book presents the most recent findings on topics such as general aspects of the autonomic nervous system, main neurotransmitter systems, age-dependent changes of neuroeffector mechanisms in target organs, and therapeutic perspectives. It also provides a comprehensive analysis of the possible consequences of these findings. Aging of the Autonomic Nervous System will be a useful volume for gerontologists and neuroscientists.
