The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

This book takes a comprehensive and critical look at current issues and trends in nursing, and examines future health care and market place consumer demands—as they relate to success in professional practice. It discusses the ever-accelerating pace of change occurring in the field, and features a broad spectrum of topics that highlight the importance of accountability, responsibility, and critical decision making for nurses of the 21st century. **KEY TOPICS** Chapter topics present an overview of the evolution of the image, education, knowledge, and professional organization of nurses; discuss professional values and core competencies, the search for employment, nursing issue management and leadership, future challenges, and much more. For new graduates and experienced nurses seeking information about the most contemporary concerns of their field.
