age? Catalysed by the threat of terrorism, fears about others have reached a new intensity. The roll call of apparent dangers seems to increase by the day: muggers, child abductors, drug dealers, hoodied teenagers. Crime has apparently reached such high levels that CCTV cameras are required in every town centre, and parents are so fearful that many children never go out alone. Until recently, no one suspected just how common paranoia was. But new research suggests that around a quarter of us have regular paranoid thoughts, and probably lots more have them occasionally. Paranoia is so prevalent that there's a very good chance that all of us will, at some point in our lives, be among the 25%. Yet, although paranoia is as common as depression or anxiety, most of us

know almost nothing about it. What is paranoia? What causes it? Are some people more prone to paranoia than others? Are we more paranoid now than we used to be? How should we deal with our paranoid thoughts? And how can we reduce the amount of paranoia in our society? Co-written by one of the world's leading psychologists of paranoia, and drawing on the latest scientific research, this lively and accessible book answers these key questions, highlighting for the first time the central role of paranoia in our world today.

education have exposed people to more information than ever before. These societal gains, however, have also helped fuel a surge in narcissistic and misguided intellectual egalitarianism that has crippled informed debates on any number of issues. Today, everyone knows everything: with only a quick trip through WebMD or Wikipedia, average citizens believe themselves to be on an equal intellectual footing with doctors and diplomats. All voices, even the most ridiculous, demand to be taken with equal seriousness, and any claim to the contrary is dismissed as undemocratic elitism. Tom Nichols' *The Death of Expertise* shows how this rejection of experts has occurred: the openness of the internet, the emergence of a customer satisfaction model in higher education, and the

transformation of the news industry into a 24-hour entertainment machine, among other reasons. Paradoxically, the increasingly democratic dissemination of information, rather than producing an educated public, has instead created an army of ill-informed and angry citizens who denounce intellectual achievement. When ordinary citizens believe that no one knows more than anyone else, democratic institutions themselves are in danger of falling either to populism or to technocracy or, in the worst case, a combination of both. An update to the 2017 breakout hit, the paperback edition of *The Death of Expertise* provides a new foreword to cover the alarming exacerbation of these trends in the aftermath of Donald Trump's election.
