This comprehensive volume examines the nature, causes, and consequences of state religion policy in 183 countries between 1990 and 2014. Each contribution uses round 3 of the Religion and State dataset which includes information on 117 distinct state religion policies. Secular and religious forces in society and government compete in order to influence state religion policy in a vibrant religious economy. While governments are more involved in religion in 2014 than they were in 1990, most states both added and dropped religion policies during this period. This is important because these policies impact on a number of important political, social, and economic phenomena. In this collection the authors examine the impact of state religion policies on interstate militarized disputes, violent domestic conflict, terrorism, and voting for political parties. They also examine some of the factors that

influence state religion policy, including the attitudes of citizens toward religion and religious minorities, free and open elections, and having an independent judiciary. This book was originally published as a special issue of the journal Religion, State & Society.

Writing a comprehensive book on satellite communications requires the command of many technical disciplines and the availability of up-to-date information on international recommendations, system architectures, and equipment standards. It is therefore necessary to involve many authors, each possessing a good level of knowledge in a particular discipline. The problem of using a coherent and unambiguous set of definitions and basic terms has been solved by including in the book all the background information needed for understanding satellite communication systems, without any major reference to other textbooks specializing in particular disciplines. The obvious consequence of this approach has been the large size of the book, with the advantages, however, of practically complete independence from other books, more systematic discussion of the subject matter, and better readability. After the required background information, emphasis has been placed on the discussion of techniques and system design criteria rather than on specific equipment implementation or description of particular systems. The book may be divided in five parts as follows:

- The first five chapters provide most of the required background information.
- Chapter 6 is an introductory outline of satellite communication systems.
- Chapters 7 to 13 deal with the various aspects of technical system design.
- Chapter 14 discusses system economics.
- Chapter 15 provides a brief insight into some foreseeable future developments of satellite communications.

In this fascinating book, Vic Satzewich traces one hundred and twenty-five years of Ukranian migration, from the economic migration at the end of the nineteenth century to the political migration during the inter-war period and throughout the 1960s and 1980s resulting from the troubled relationship between Russia and the Ukraine. The author looks at the ways the Ukranian Diaspora has retained its identity, at the different factions within it and its response to the war crimes trials of the 1980s.

Volume II of The Official History of the UK Strategic Nuclear Deterrent provides an authoritative and in-depth examination of the British government's strategic nuclear policy from 1964 to 1970. Written with full access to the UK documentary record, Volume II examines the controversies that developed over nuclear policy following the arrival in office of a Labour government led by Harold Wilson in October 1964 that openly questioned the independence of the deterrent. Having decided to preserve the Polaris programme, Labour ministers were nevertheless committed not to develop another generation of nuclear weapons beyond those in the pipeline, placing major doubts over the long-term future of the nuclear programme and collaboration with the United States. Defence planners also became increasingly concerned that the deployment of Soviet anti-ballistic missile (ABM) defences around Moscow threatened to undermine the ability of Polaris to fulfil its role as a national strategic nuclear deterrent. During 1967, under heavy pressures to control defence spending, a protracted debate was conducted within Whitehall over the future of Polaris and how to respond to the evolving ABM challenge. The volume concludes with Labour's defeat at the

general election of June 1970, by which time the Royal Navy had assumed the nuclear deterrent role from the RAF, and plans had already been formulated for a UK project to improve Polaris which could both ensure its continuing credibility and rejuvenate the Anglo-American nuclear relationship. This book will be of much interest to students of British politics, Cold War history, nuclear proliferation and international relations.

This edition is not just a rehash of old, albeit classic and still important, stuff. Instead, it provides a fresh perspective on a topic of perennial interest for those working in the field that has been variously called training and development, human resource development, performance technology, and workplace learning and performance. The fresh perspective takes into consideration two additional instructor settings to the traditional face-to-face environments that most instructors and trainers know -- that is, online and blended settings. These settings are, of course, becoming more critical as instruction moves beyond classroom settings to include virtual and combinations of classroom and other media delivery methods. The ibstpi instructor competencies match up well to Mapping the Future (Bernthal, Colteryahn, Davis, Naughton, Rothwell, & Wellins 2004), the current ASTD competency study of the field now known as Workplace Learning and Performance (WLP) and previously known as Training and Development (T&D). WLP is more than a new name for an old subject and represents a fundamental paradigm shift in what it means to be a professional in the field formerly known as training. WLP is all about getting improved performance -- and therefore improved results -- in organizational settings through planned and unplanned learning interventions. Instruction is thus a means to an end and not an end in itself. The ibstpi

instructor competencies dovetail well with that philosophy.

From the New York Times bestselling author of *Shoe Addicts Anonymous* and *Always Something There to Remind Me* comes a delicious new novel about the search for true love and all the ingredients that go into it. As far as Gemma is concerned, her days of dating are over. In fact, it's her job to cater other peoples' dates, and that's just fine by her. At thirty-seven, she has her own business, working as a private chef, and her life feels full and secure. She's got six steady clients that keep her hands full. There's Lex, the fussy but fabulous department store owner who loves Oysters Rockefeller and 1950s comfort food; Willa, who needs to lose weight under doctor's orders but still believes butter makes everything better; a colorful family who may or may not be part of the Russian mob; an überwealthy Georgetown family; the picture-perfect Van Houghtens, whose matriarch is "allergic to everything"; and finally, a man she calls "Mr. Tuesday," whom she has never met but who she is strangely drawn to. For Gemma, cooking is predictable. Recipes are certain. Use good ingredients, follow the directions, and you are assured success. Life, on the other hand, is full of variables. So when Gemma's takes an unexpected turn on a road she always thought was straight and narrow, she must face her past and move on in ways she never would have imagined. Because

sometimes in life, all you need is a little hope, a lot of courage, and---oh yes---butter.

Most readers do not know about the Bible used almost universally by early Christians, or about how that Bible was birthed, how it grew to prominence, and how it differs from the one used as the basis for most modern translations. Although it was one of the most important events in the history of our civilization, the translation of the Hebrew Scriptures into Greek in the third century BCE is an event almost unknown outside of academia. Timothy Michael Law offers the first book to make this topic accessible to a wider audience. Retrospectively, we can hardly imagine the history of Christian thought, and the history of Christianity itself, without the Old Testament. When the Emperor Constantine adopted the Christian faith, his fusion of the Church and the State ensured that the Christian worldview (which by this time had absorbed Jewish ideals that had come to them through the Greek translation) would leave an imprint on subsequent history. This book narrates in a fresh and exciting way the story of the Septuagint, the Greek Scriptures of the ancient Jewish Diaspora that became the first Christian Old Testament.

From the author of the definitive heavy metal history, *Bang Your Head*, a behind-the-scenes look a century of horror films *Reel Terror* is a love letter to the wildly popular yet still misunderstood genre that churns out blockbusters and cult classics year after year. From *The Cabinet of Dr. Caligari* to *Paranormal Activity*, Konow explores its all-time highs and lows, why the genre has been overlooked, and how horror films just might help us overcome fear. His on-set stories and insights delve into each movie and its effect on American culture. For

Secret Lives of Great Artists recounts the seamy, steamy, and gritty history behind the great masters of international art. You ' ll learn that Michelangelo ' s body odor was so bad, his assistants couldn ' t stand working for him; that Vincent van Gogh sometimes ate paint directly from the tube; and Georgia O ' Keeffe loved to paint in the nude. This is one art history lesson you ' ll never forget!
