Plant Breeding Matters Bspb

Plant breeding is the business and science of crop improvement. It is an innovation-based sector, focused on developing plants better adapted to human needs. The demand for new varieties of agricultural and horticultural crops, adapted to our unique growing conditions, is never ending, driven by the challenges of new pest and disease pressures, weather patterns and changing market requirements.

Plant Breeding Matters

Plant Breeding Matters. Lord Gardiner applauds the urgent and essential work of plant breeders. That was the strong message from Lord Gardiner, Parliamentary Under Secretary of State at Defra, speaking at BSPB's Annual General Meeting at the Royal Society. Paying tribute to the work of plant breeders, Lord Gardiner said: 'The work that you and your predecessors have done over hundreds of years is to transform our ability to produce food and improve the health and prosperity of so many ...

Plant Breeding Matters. A joint initiative between BSPB and the major UK farming unions (NFU, NFUS and UFU), the FAIR PLAY campaign was established in 2005 to address concerns that evasion of farm-saved seed payments was draining vital income away from investment in UK-based plant breeding. The central objective of the FAIR PLAY campaign is to create a level playing-field in which all farmers contribute fairly for the benefits of using farm-saved seed, so safeguarding future investment in ...

Recent mergers in the seed industry have led to concerns about market concentration and its potential effects on prices, product choice, and innovation. This study provides new and detailed empirical evidence on the degree of market concentration in seed and GM technology across a broad range ...

The book contains research articles and reviews recently published online for the MDPI journal Diversity, in the Special Issue "Genetic diversity of soil bacterial communities". The issue aimed to collect up to date information from the international scientific community to get insight in the "black box", as soil has been defined in the last decades, focusing in detail on the role that the microbial communities have in soil processes such as carbon and nutrient fluxes and on their genetic and functional diversity. The book meets the interests of scientific communities directly involved in the topics investigated, as well as of PhD students, scholars, professional organizations interested in improving their knowledge on a group of organisms considered vitally important to the maintenance and sustainability of the biosphere, where soil has a key role as an important natural resource.

Recent mergers in the seed industry have led to concerns about market concentration and its potential effects on prices, product choice, and innovation. This study provides new and detailed empirical evidence on the degree of market concentration in seed and GM technology across a broad range of crops and countries, and analyses the causes and potential effects of concentration. It also explains how competition authorities have responded to mergers, and suggests policy options to help safeguard and stimulate competition and innovation in plant breeding by avoiding unnecessary regulatory barriers, by facilitating access to genetic resources and intellectual property, as well as by stimulating public and

private R&D. As this study shows, policy makers have several levers besides competition policy to ensure an innovative and competitive seed industry.

Originally published in 1999 *The Commercial Use of Biodiversity* examines how biodiversity and the genetic material it contains are now as valuable resources. Access to genetic resources and their commercial development involve a wide range of parties such as conservation and research institutes, local communities, government agencies and companies. Equitable partnerships are not only crucial to conservation and economic development but are also in the interests of business and often required by law. In this authoritative and comprehensive volume, the authors explain the provisions of the Convention on Biological Diversity on access and benefit-sharing, the effect of national laws to implement these, and aspects of typical contracts for the transfer of materials. They provide a unique sector-by-sector analysis of how genetic resources are used, the scientific, technological and regulatory trends and the different markets in Pharmaceuticals, Botanical Medicines, Crop Development, Horticulture, Crop Protection, Biotechnology (in fields other than healthcare and agriculture) and Personal Care and Cosmetics Products. This will be an essential sourcebook for all those in the commercial chain, from raw material collection to product discovery, development and marketing, for governments and policy-makers drafting laws on access and for all the institutions, communities and individuals involved in the conservation, use, study and commercialisation of genetic resources.

This report examines the ethical and social issues associated with the development and cultivation of genetically modified (GM) crops, particularly in relation to: the scientific background and techniques used in genetic modification; the potential of GM crops; commercial and legal implications; implications

for the developing world; consumer concerns; environmental concerns; regulation and policy issues.

This toolkit – made available in English, French and Spanish – will be promoted as practical guidance to assist in the implementation of the national seed strategies. It will provide a number of practical capacity building tools for essential stages of the seed value chain and targeted primarily at seed sector practitioners who will participate in special training workshops to acquire pertinent technical knowledge and will be expected in return to create a multiplier effect through further follow-up FFS trainings down to the level of seed traders and farmers. In doing so, the toolkit will be used as guidance for conducting country-led workshops and other training activities aimed at strengthening quality seed delivery systems and seed regulatory mechanisms in selected countries. The development of capacity in the production of high quality seeds, the seed replacement rates, true seed cost and realistic seed pricing mechanisms as well as the role of different stakeholders are of critical importance in the process of the formulation of national seed policies, which is one of the core areas of FAO's delivery at the national level.

The Agricultural Outlook 2019-2028 is a collaborative effort of the Organisation for Economic Co-operation and Development (OECD) and the Food and Agriculture Organization (FAO) of the United Nations. It brings together the commodity, policy and country expertise of both organisations as well ...
