The RDS-1 was created as a prototype for evaluation of a complex, portable, turnkey, video / audio recording studio for today's Concert Video Producers, TV Producers, industrial Media departments, high end Videographer, or well-funded Band that wants to produce their own video segments. The 24 track 24 bit hard disk recording deck from Mackie takes the 24 tracks from the 2 on board retractable Mackie 1604 VLZ mixing boards and cleanly records them onto a removable computer hard disk. This unit also provides equipment to direct a 6 video camera crew including video screens, preview and program out switchers and an intercom system. Even though major pieces of equipment like the Makie 24/96 hard disk recorder are out of production there are a number of even better recorders that can take its place when you decide to make your own recording console. This book will be an invaluable tool at the design stage as well as a guide to write your own OPERATIONS MANUAL. Captain Willy

This book has been written with the intention of providing an up-to-the minute review of acute coronary syndromes. Atherosclerotic coronary disease is still a leading cause of death within developed countries and not surprisingly, is significantly rising in others. Over the past decade the treatment of these syndromes has changed dramatically. The introduction of novel therapies has impacted the outcomes and surviving rates in such a way that the medical community need to be up to date almost on a "daily bases". It is hoped that this book will provide a timely update on acute coronary syndromes and prove to be an invaluable resource for practitioners seeking new and innovative ways to deliver the best possible care to their patients.

The Third Edition of ANSI/ACCA Manual D is the Air Conditioning Contractorsof America procedure for sizing residential duct systems. This procedureuses Manual J (ANSI/ACCA, Eighth Edition) heating and cooling loads todetermine space air delivery requirements. This procedure matches duct system resistance (pressure drop) to blower performance (as defined by manufacture's blower performance tables). This assures that appropriate airflow is delivered toall rooms and spaces; and that system airflow is compatible with the operatingrange of primary equipment. The capabilities and sensitivities of this procedureare compatible with single-zone systems, and multi-zone (air zoned) systems. The primary equipment can have a multi-speed blower (PSC motor), or avariable-speed blower (ECM or constant torque motor, or a true variable speed motor).Edition Three, Version 2.50 of Manual D (D3) specifically identifiesnormative requirements, and specifically identifies related informative material.
