This revision of Bloom's taxonomy is designed to help teachers understand and implement standards-based curriculums. Cognitive psychologists, curriculum specialists, teacher educators, and researchers have developed a two-dimensional framework, focusing on knowledge and cognitive processes. In combination, these two define what students are expected to learn in school. It explores curriculums from three unique perspectives-cognitive psychologists (learning emphasis), curriculum specialists and teacher educators (C & I emphasis), and measurement and assessment experts (assessment emphasis). This revisited framework allows you to connect learning in all areas of curriculum. Educators, or others interested in educational psychology or educational methods for grades K-12.

Assessment for Learning is based on a two-year project involving thirty-six teachers in schools in Medway and Oxfordshire. After a brief review of the research background and of the project itself, successive chapters describe the specific practices which teachers found fruitful and the underlying ideas about learning that these developments illustrate. Later chapters discuss the problems that teachers encountered when implementing the new practices in their classroom and give guidance for school management and LEAs about promoting and supporting the changes. --from publisher description

These standards have been prepared to promote uniformity in the appraisal of real property among the various agencies acquiring property on behalf of the U.S., by both direct purchase & condemnation. Contents: standards for approaching the solution to certain recurring appraisal problems (cost approach, income approach, highest & best use, etc.); data documentation & appraisal reporting standards (zoning & other land use regulations, contents of appraisal report, etc.); general standards of a miscellaneous nature (impartiality, witness composure, leasehold takings, etc.). Cases & statutes.

A critical issue in higher education is the effective implementation of assessment with the core purpose of promoting productive student learning. This edited collection provides a state-of-the-art discussion of recent, cutting-edge work into assessment for learning in higher education. It introduces a new theme of scaling up, which will be welcomed by theorists, researchers, curriculum leaders and university teachers, and showcases the work of leading figures from Australia, England, continental Europe and Hong Kong. The work illuminates four key elements: (1) Enabling assessment change; (2) Assessment for learning strategies and implementation; (3) Feedback for learning; (4) Using technology to facilitate assessment for learning. Solidly research-based and carrying important implications for enhanced practice in assessment for learning at the university level, it is a must read for academic developers, researchers, university teachers, academic leaders and all those interested in assessment matters.

This book is a collection of analyses of the social determinants of health that impact on specific health conditions. Stemming from the recommendations of the Commission on Social Determinants of Health, promising interventions to improve health equity are presented for the areas of: alcohol-related disorders, cardiovascular diseases, child health and nutrition, diabetes, food safety, maternal health, mental health, neglected tropical diseases, oral health, pregnancy outcomes, tobacco and health, tuberculosis, and violence and injuries. The book was commissioned by the Department of Ethics, Equity, Trade and Human Rights as part of the work undertaken by the Priority Public Health Conditions Knowledge Network of the Commission on Social Determinants of Health, in collaboration with 16 of the major public health programmes of WHO. In addition to this, through collaboration with the Special Programme of Research, Development and Research Training in Human Reproduction, the Special Programme for Research and Training in Tropical Diseases, and the Alliance for Health Policy and Systems Research, 13 case studies were commissioned to examine the implementation challenges in addressing social determinants of health in low-and middle-income settings.

Assessment is a value-laden activity surrounded by debates about academic standards, preparing students for employment, measuring quality and providing incentives. There is substantial evidence that assessment, rather than teaching, has the major influence on students' learning. It directs attention to what is important and acts as an incentive for study. This book revisits assessment in higher education, examining it from the point of view of what assessment does and can do and argues that assessment should be seen as an act of informing judgement and proposes a way of integrating teaching, learning and assessment to better prepare students for a lifetime of learning. It

is essential reading for practitioners and policy makers in higher education institutions in different countries, as well as for educational development and institutional research practitioners.

This book constitutes the thoroughly refereed proceedings of the First International Conference on Brain Function Assessment in Learning, BFAL 2017, held in Patras, Greece, in September 2017. The 16 revised full papers presented together with 2 invited talks and 6 posters were carefully selected from 28 submissions. The BFAL conference aims to regroup research in multidisciplinary domains such as neuroscience, health, computer science, artificial intelligence, human-computer interaction, education and social interaction on the theme of Brain Function Assessment in Learning.

Signs of Change: Assessment Past, Present and Future Another Time, Another Place...Examinations Then and Now In the Temple of Literature in Hanoi, Vietnam, a series of stone stelae records the names of the handful of illustrious examination candidates who, in each century, passed the national examination to become a Doctor of Literature. Beginning in the 11th century, the exams were conducted personally by successive kings who pursued Confucian ideals that found expression in the enormous value placed on the pursuit of wisdom and learning. In the 21st century we are both puzzled and impressed by this tradition. Puzzled by such an explicit commitment to a meritocracy in an essentially feudal society; impressed by this enthusiasm for learning and the pursuit of wisdom at the highest level of society. Yet, there are also important similarities between the 11th and 21st centuries. Then, as now, assessment was associated with excellence, high standards, prestige and competition—success for the chosen few; disappointment for the majority. Then, as now, the pursuit of excellence was embedded in a social context that favoured the elite and determined success in terms of the predilections of the powerful. Then, as now, the purpose of the assessment, the way it was conducted and its impact on society all reflected the social and economic priorities of the day.

White Space Is Not Your Enemy is a practical graphic design and layout guide that introduces concepts and practices necessary for producing effective visual communication across a variety of formats—from web to print. Sections on Gestalt theory, color theory, and WET layout are expanded to offer more in-depth content on those topics. This new edition features new content covering current trends in web design—Mobile-first, UI/UX design, and web typography—and how they affect a designer's approach to a project. The entire book will receive an update using new examples and images that show a more diverse set of graphics that go beyond print and web and focus on tablet, mobile and advertising designs.
