This book opens up a range of important perspectives on law and violence by considering the ways in which their relationship is formulated in literature, television and film. Employing critical legal theory to address the relationship between crime fiction, law and justice, it considers a range of topics, including: the relationship between crime fiction, legal reasoning and critique; questions surrounding the relationship between law and justice; gender issues; the legal, political and social impacts of fictional representations of crime and justice; post-colonial perspectives on crime fiction; as well as the impact of law itself on the crime fiction's development. Introducing a new sub-field of legal and literary research, this book will be of enormous interest to scholars in critical, cultural and socio-legal studies, as well as to others in criminology, as well as in literature.

Seventeen weeks pregnant and facing a miscarriage, Savita Halappanavar and her husband Praveen walked into an Irish maternity ward in October 2012. Unwittingly, the couple also walked into that deeply controversial arena in which Ireland's legislative position on abortion remained unresolved. A week later, Savita was dead from septicaemia. Reports of her death and of the refusal to allow Savita a termination of her pregnancy sent shockwaves across Ireland and around the world. Once again the subject of abortion was catapulted to the very top of the agenda in Ireland. With the pro-life and pro-choice camps claiming the moral high ground, both sides in the bitterly contested battle sought to appropriate Savita's story and her image. In the midst of the ensuing rage and furore, the marches and protests, the threats and counter-threats that exploded across political and media platforms, Savita and the complete circumstances of her death were lost. In *Savita: The Tragedy That Shook A Nation*, Kitty Holland addresses this imbalance as she reveals the truth behind the headlines and explores many unanswered questions: Who was Savita? How significant was it that she was a non-Irish, non-Catholic woman in search of help on Irish soil? And how did her husband and her community's reaction to her death shape the parameters of the debate which followed? Holland's exposé also looks at how the tragic circumstances of Savita's death played a part in compelling the Irish Government to finally legislate on abortion and how activists on each side succeeded or failed in shaping that legislation.

In a contemporary setting of increasing social division and marginalisation, *Policing Hate Crime* interrogates the complexities of prejudice motivated crime and effective policing practices. Hate crime has become a barometer for contemporary police relations with vulnerable and marginalised communities. But how do police effectively lead conversations with such communities about problems

arising from prejudice? Contemporary police are expected to be active agents in the pursuit of social justice and human rights by stamping out prejudice and group-based animosity. At the same time, police have been criticised in over-policing targeted communities as potential perpetrators, as well as under-policing these same communities as victims of crime. Despite this history, the demand for impartial law enforcement requires police to change their engagement with targeted communities and kindle trust as priorities in strengthening their response to hate crime. Drawing upon a research partnership between police and academics, this book entwines current law enforcement responses with key debates on the meaning of hate crime to explore the potential for misunderstandings of hate crime between police and communities, and illuminates ways to overcome communication difficulties. This book will be important reading for students taking courses in hate crime, as well as victimology, policing, and crime and community.

Design and Optimization of Biogas Energy Systems presents an overview on planning, implementing, assessing and optimizing biogas systems, from fuel conversion to power generation. The book introduces the fundamental elements of bioenergy systems, highlighting the specificities of biogas systems. It discusses the current state of their adoption at a global level and the challenges faced by designers and operators. Methods for sizing, simulating and modeling are discussed, including prefeasibility analysis, available production processes, integration into hybrid energy systems, and the application of Big Data analysis and game theory concepts. All chapters include real-life examples and exercises to illustrate the topics being covered. The book goes beyond theory to offer practical knowledge of methods to reach solutions to key challenges in the field. This is a valuable resource for researchers, practitioners and graduate students interested in developing smart, reliable and sustainable biogas technologies. Provides an applied approach to biogas systems, from technology fundamentals, to economic and environmental assessment Explores control methods and reliability prediction of each system component, including modeling and simulation with HOMER and MATLAB Discusses the use of Big Data analysis, numerical methods, and Game Theory for plant assessment

Argues that rising powers challenge international order when their status ambitions seem to be unjustly and permanently blocked.

Although scientific models and simulations differ in numerous ways, they are similar in so far as they are posing essentially philosophical problems about the nature of representation. This collection is designed to bring together some of the best work on the nature of representation being done by both established senior philosophers of science and younger researchers. Most of the pieces, while appealing to existing traditions of scientific representation, explore new types of questions, such as: how understanding can be developed within computational science; how the format of representations matters for their use, be it for the purpose of research or education; how the concepts of emergence and supervenience can be further analyzed by taking into account computational science; or how the emphasis upon tractability--a particularly important issue in computational science--sheds new light on the philosophical analysis of scientific reasoning.

Supersymmetry (SUSY) is one of the most important ideas ever conceived in particle physics. It is a symmetry that relates known elementary particles of a certain spin to as yet undiscovered particles that differ by half a unit of that spin (known as Superparticles). Supersymmetric models now stand as the most promising candidates for a unified theory beyond the Standard Model (SM). SUSY is an elegant and simple theory, but its existence lacks direct proof. Instead of dismissing supersymmetry altogether, *Supersymmetry Beyond Minimality: from Theory to Experiment* suggests that SUSY may exist in more complex and subtle manifestation than the minimal model. The book explores in detail non-minimal SUSY models, in a bottom-up approach that interconnects experimental phenomena in the fermionic and bosonic sectors. The book considers with equal emphasis the Higgs and Superparticle sectors, and explains both collider and non-collider experiments. Uniquely, the book explores charge/parity and lepton flavour violation. *Supersymmetry Beyond Minimality: from Theory to Experiment* provides an introduction to well-motivated examples of such non-minimal SUSY models, including the ingredients for generating neutrino masses and/or relaxing the tension with the heavily constraining Large Hadron Collider (LHC) data. Examples of these scenarios are explored in depth, in particular the discussions on Next-to-Minimal Supersymmetric SM (NMSSM) and B-L Supersymmetric SM (BLSSM).
