Truly, we have been given everything we need: We really can fly on our own wings!

Chris Heintz is a professional aeronautical engineer with a prolific career spanning over 40 years designing and building light aircraft. Recognized worldwide as a uniquely talented and accomplished designer, his aircraft are known and appreciated for their simplicity of construction, pilot-friendly cabins and controllability as well as remarkable performances. Today, Chris Heintz designs are flown throughout the world, mostly by recreational pilots who have assembled their own planes from a kit. His most popular models are also factory-assembled and sold as ready-to-fly sport aircraft on three continents. In **FLYING ON YOUR OWN WINGS**, Mr. Heintz shares his knowledge and insights into the art and science of light aircraft design. He

Homebuilders becomes an aircraft designer. Half the book is Raymer's warm and personal memoir of growing up in the 50's and 60's as the son of a Navy Test Pilot, discovering his own love of aviation, and entering the rarefied club of those who stare at a blank sheet of paper and turn it into a new aircraft or spacecraft design. The other half covers Raymer's early involvement in the projects that became the B-2, F-22, T-45, F-35, and many more. The book is an "easy" read, quick-paced, funny, and aimed at a general audience. Raymer includes his mistakes, disappointments, and downright stupid decisions. It's not all airplanes either - read about Raymer's aborted musical career, his misadventures in exotic destinations like Belarus, Turkey, and Bulgaria, how he got on the Internet early enough to grab www.aircraftdesign.com, and how he came to write his design textbook.
