House and Hitselberger first described the transcochlear approach in 1976. 54 This approach was designed to reach petroclival or large median intradural lesions and cerebellopontine angle tumors, which were considered inoperable until this point. The original transcochlear approach is an anteromedial extension of the translabyrinthine approach with additional posterior transposition of the facial nerve, removal of the cochlea, and removal of the petrous bone.</p>

<p>Surgical approaches to the petrous apex — ScienceDirect Four surgical approaches required a superficial parotidectomy with identification of the facial nerve, one of which revealed an aberrant facial nerve. In one case the tract was found to travel into the angle of the mandible, terminating as a mandibular cyst. This required en bloc excision that included the lateral cortex of the mandible.</p>
