When you go shopping, do you simply go to the store with the intention of buying as many items as you can? Or do you select items based on the quality and satisfaction they will deliver for the money you spend? For most people, the quality of a product, relative to its cost, is most important. The field of healthcare today is making a similar distinction, placing a heightened emphasis on the delivery of value as opposed to sheer volume. So what exactly does it mean to deliver value in healthcare? For decades, providers in the United States operated according to a model of volume-based care, under the general assumption that more care was better. In recent years, however, important developments in policy and payment and innovations in disease management, complex case management, population health, predictive analytics, and decision support have contributed to a paradigm shift toward value-based care. Organizations are now striving to eliminate waste, deliver higher-quality care at a lower cost, and increase patient satisfaction. The Core Elements of Value in Healthcare provides a comprehensive introduction to value in healthcare as it relates to policy, delivery, finance, economics, strategy, public health, population health, operations, compliance, managed care, accountable care, and preventive medicine. The concepts of this book are reinforced through case examples and detailed discussion questions that encourage readers to apply the key principles as they learn. Drawing from his experience as a physician, a hospital executive, and the founder of a medical group and health plan, Dr. Paveljit S. Bindra examines value from a variety of perspectives. Specific areas of focus include the following: Clinical innovationsAlignment structuresPayment reformQuality improvementInformation technology The Core Elements of Value in Healthcare equips readers with the knowledge to address disparate elements in the healthcare value chain, and it demonstrates how effective coordination of these elements can enhance the quality of care, reduce costs, and improve patient satisfaction and outcomes.

The globalization of science, engineering, and medical research is proceeding rapidly. The globalization of research has important implications for the U.S. research enterprise, for the U.S. government agencies, academic institutions, and companies that support and perform research, and for the world at large. As science and technology capabilities grow around the world, U.S.-based organizations are finding that international collaborations and partnerships provide unique opportunities to enhance research and training. At the same time, significant obstacles exist to smooth collaboration across national borders. Enhancing international collaboration requires recognition of differences in culture, legitimate national security needs, and critical needs in education and training. In response to these trends, the Government-University-Industry Research Roundtable (GUIRR) launched a Working Group on International Research Collaborations (I-Group) in 2008, following its meeting on New Partnerships on a Global Platform that June. As part of I-Group's continuing effort, a workshop on Examining Core Elements of International Research Collaboration was held July 26-27, 2010 in Washington, DC. One primary goal of the workshop is to better understand the risks involved in international research collaboration for organizations and individual participants, and the mechanisms that can be used to manage those risks. Issues to be addressed in the workshop include the following: (1) Cultural Differences and Nuances; (2) Legal Issues and Agreements; (3) Differences in Ethical Standards; (4) Research Integrity and the Responsible Conduct of Research; (5) Intellectual Property; (6) Risk Management; (7) Export Controls; and (8) Strategies for Developing Meaningful International Collaborations. The goal for the workshop and the summary, Examining Core Elements of International Research Collaboration, is to serve as an information resource for participants and others interested in international research collaborations. It will also aid I-Group in setting its future goals and priorities.

In this book Peter Smagorinsky and Joel Taxel analyze the ways in which the perennial issue of character education has been articulated in the United States, both historically and in the current character education movement that began in earnest in the 1990s. The goal is to uncover the ideological nature of different conceptions of character education. The authors show how the current discourses are a continuation of discourse streams through which character education and the national purpose have been debated for hundreds of years, most recently in what are known as the Culture Wars--the intense, often passionate debates about morality, culture, and values carried out by politicians, religious groups, social policy foundations, and a wide range of political commentators and citizens, in which the various stakeholders have sought influence over a wide range of social and economic issues, including education. The centerpiece is a discourse analysis of proposals funded by the United States Department of Education's Office of Educational Research and Improvement (OERI). Discourse profiles from sets of states that exhibit two distinct conceptions of character are examined and the documents from particular states are placed in dialogue with the OERI Request for Proposals. One profile reflects the dominant perspective promoted in the U.S., based on an authoritarian view in which young people are indoctrinated into the value system of presumably virtuous adults through didactic instruction. The other reflects the well-established yet currently marginal discourse emphasizing attention to the whole environment in which character is developed and enacted and in which reflection on morality, rather than didactic instruction in morality, is the primary instructional approach. By focusing on these two distinct regions and their conceptions of character, the authors situate the character education movement at the turn of the twenty-first century in the context of historical notions about the nature of character and regional conceptions regarding the nature of societal organization. This enlightening volume is relevant to scholars, practitioners, policymakers, and students across the field of education, particularly those involved in character education, moral development, discourse analysis, history and cultural foundations of education, and related fields, and to the wider public interested in character education.

This volume of papers from the 13th International Conference on Methods in Dialectology, held at the University of Leeds in 2008, collects together current research and recent

methodological developments in the study of dialects by new and established scholars. It is organised into themed sections reporting on historical dialectology, dialect literature, the production of dialect maps and atlases, and the collection and organisation of material for dialect dictionaries and corpora. Perceptual dialectology and dialect intelligibility are also featured, and there are linguistic analyses of dialectal data from many language varieties.
