Science of kissing: why a kiss is not just a kiss
Kirshenbaum examines both lips and kissing from an evolutionary, psycho-social, and biological point of view - each of which is equally fascinating. The lips alone are kind of a mind-blowing structure; densely packed with nerve endings, the lips respond intensely to every kind of stimuli which, in turn, triggers a massive response in the brain.

From a noted science journalist comes a wonderfully witty and fascinating exploration of how and why we kiss. When did humans begin to kiss? Why is kissing integral to some cultures and alien to others? Do good kissers make the best lovers? And is that expensive lip-plumping gloss worth it? Sheril Kirshenbaum, a biologist and science journalist, tackles these questions and more in *THE SCIENCE OF KISSING*. It's everything you always wanted to know about kissing but either haven't asked, couldn't find out, or didn't realize you should understand. The book is informed by the latest studies and theories, but Kirshenbaum's engaging voice gives the information a light touch. Topics range from the kind of kissing men like to do
