**Unknowns** The Symmetries Of Things Millennium

by John H Conway, Heidi Burgiel and Chaim  
Goodman-Strauss. Symmetry abounds: the  
wallpaper, your chair, even your own body.  
Familiar types of symmetry include reflection  
in a line and rotation about a point.  
Creating a repeating pattern by translating a  
core segment to a new place, common in  
wallpaper, also counts as a symmetry, as does

## The Symmetries Of Things Millennium Mathematics Project

Show that tangles labeled with  $n = 0$  have the required symmetries. Show that if all tangles labeled with  $n$  have the required symmetries, then so do all tangles labeled with  $n + 1$ .

Step 1: Labeling. One way to label all tangles with an integer  $n$  is simply to count the number of twists. So the tangle generated by the sequence: {twist, twist, turn ...
