Timber framing has a long history throughout the world as a traditional building practice. With timber framing, heavy, large timbers frame the structure instead of more slender dimensional lumber (for example, 2 x 6's.). One of the most distinctive characteristics of a timber frame is the unique joinery that holds the timbers together.

~~10 MINUTE TIMBER FRAMING~~

YouTube

Timber framing and "post-and-beam" construction are traditional methods of building with heavy timbers, creating structures using squared-off and carefully fitted and joined timbers with joints secured by large wooden pegs. It is commonplace in wooden buildings through the 19th century. If the structural frame of load-bearing timber is left exposed on the exterior of the building it may be ...

Final Framing of the Three Gable Timber Frame style Pavillion. And that's the principle framing done. Connor worked on his own to add fascia boards and all the roof strapping. Initially we planned to roll out tar paper over the strapping before adding the metal roof. Connor decided to use plywood instead.

~~Brunswick Timber Frames, Inc.~~

Framing, in construction, is the fitting together of pieces to give a structure support and shape. Framing materials are usually wood, engineered wood, or structural steel. The alternative to framed construction is generally called mass wall construction, where horizontal layers of stacked materials such as log building, masonry, rammed earth, adobe, etc. are used without framing.

~~Framing (construction) — Wikipedia~~

Timber framing is a distinctive style of building construction in which heavy timbers frame the structure instead of more slender dimensional lumber (for example, 2 x 6-in.). Timber framing was a building practice used throughout the world until roughly 1900 when the demand for cheap, fast
