This volume documents international, national, and small-scale testing and assessment projects of English language education for young learners, across a range of educational contexts. It covers three main areas: age-appropriate [can do statements] and task types for teaching and testing learners between the ages of 6 to 13; innovative approaches to self-assessment, diagnostic testing, self- perception, and computer-based testing; and findings on how young learners perform on vocabulary, listening, speaking, pronunciation, and reading comprehension tests in European and Asian contexts. Early language learning has become a major trend in English language education around the globe. As a result of the spread of teaching English to a growing number of young children, assessment of and for learning have emerged as key issues. In line with this development, there is a clear and emerging need to make early language programs accountable and to assess both the progress children make over time and to quantify their achievement at various stages of development. This volume informs stakeholders about the realistic goals of early language learning, their efficiency, and how much progress children make over time.

This book focuses on how instruction affects English learners' use of Theme and thematic progression (thematic organization). While thematic organization in learner English has been extensively studied, little research has been done to investigate the effects of instruction on the use of Theme and thematic progression. Adopting a Systemic Functional Grammar approach, this study explores how a ten-week instruction on thematic organization affects Chinese college students' use of Theme and thematic progression by comparing their English essays before and after the instruction, with native-speaker essays as the research baseline. Second-language acquisition researchers, curriculum developers and foreign language teachers will find this book useful as it not only presents a clear and detailed report of how Chinese college students learn to make better thematic choices, but also provides a well-developed instructional package on Theme and thematic progression.

This book constitutes the proceedings of the Thiid International Conference on Hybrid Learning, ICHL 2010, held in Beijing, China, in August 2010. The 50 contributions presented in this volume were carefully reviewed and selected from 225 submissions. In addition two keynote talks are included in this book. The topics covered are interactive hybrid learning systems, content management for hybrid learning, pedagogical and psychological issues, outcome-based teaching and learning, instructional design issues, experiences in hybrid learning, improved flexibility of learning processes, computer supported collaborative learning, assessment strategies for hybrid learning, and organisational frameworks and institutional policies.

Vols. for 1898-1968 include a directory of publishers.
