"I think we need a new crystal for this thing." --Scanner guy from the 70s  
Scanners were a lot simpler in decades past, when everything was analog, had a fixed frequency, and was unencrypted. Nowadays, we have those old analog stations as well as digital, trunking systems, protocols, sites, talk groups, and who-knows-what coming down the road for next year. There are a lot of frequencies, systems, groups, codes, and little nit-picky details that have to go into our radios before we can even pick up a single call. On the other hand, radios continue to get more and more powerful, and unfortunately, more complicated to handle all the new options. This doesn't make programming them any easier. Fortunately, we have computers to handle all the programming stuff for us. Just hook the radio up to the computer, find your location on a website, transfer the frequency and channel data into the radio, and you're good to go. Sounds simple, doesn't it? If you've tried to program a digital trunking system, you know how complicated these things can get, and just how unhelpful the manuals can be. Wouldn't it be nice to just have someone go through the process and just "get the damned thing working" without all the theory? Fortunately, there are a combination of tools that you need to master to even begin. FreeSCAN is free software that works with a large number of common scanners and works for both analog and digital systems. FreeSCAN even has tools to import and set up all the frequencies automatically. If you're already comfortable programming digital trunked systems through the number pad, or have no trouble working with whatever software came with your radio, then maybe this book isn't for you. If you aren't good with computers, or you're having trouble with the basic process, don't know the difference between a talk group, site, and system, or are otherwise pulling your hair out trying to get your radio programmed, then this book is for you! We'll walk through getting the software installed and set up, connecting your radio with an appropriate cable and communications port, reading data from the radio, downloading and fine-tuning new frequency data, setting quick keys and locking out extraneous frequencies, and writing that data back out to the radio.

The cell phone is the fastest-selling consumer electronic in the world. On a global basis, over 800 million cellular telephones are sold yearly. More camera-equipped cell phones are sold each year than stand alone digital cameras. Rapid development of new technologies is leading to ever more versatile, multipurpose mobile devices, including 3G Internet-enabled cell phones and PDAs. Meanwhile, wireless networking and wireless Internet access are developing and expanding on a global basis at a rapid rate. Booming technologies include such 802.11 standards as Wi-Fi and WiMax, as well as Ultra Wide Band (UWB) and Bluetooth. Telematics, intelligent transportation systems (ITS) and satellite radio will soon create an entertainment, navigation and communications revolution within automobiles and trucks. Meanwhile, RFID (radio frequency identification) will revolutionize wireless tracking, inventory and logistics at all levels, from manufacturing to shipping to retailing. These developments are creating challenges for legacy companies and opportunities for nimble marketers and managers. Plunkett's Wireless, Wi-Fi, RFID & Cellular Industry Almanac 2008 covers such sectors. Our coverage includes business trends analysis and industry statistics. We also include a wireless and cellular business glossary and a listing of industry contacts, such as industry associations and government agencies. Next, we profile hundreds of leading companies. Our 350 company profiles include complete business descriptions and up to 27 executives by name and title.

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

A guide to the trends and leading companies in the engineering, research, design, innovation and development business fields: those firms that are dominant in engineering-based design and development, as well leaders in technology-based research and development.
