V is for Venus Flytrap: A Plant Alphabet (Science Alphabet ...

The Venus flytrap (*Dionaea muscipula*) is a carnivorous plant native to subtropical wetlands on the East Coast of the United States in North Carolina and South Carolina. It catches its prey—chiefly insects and arachnids—with a trapping structure formed by the terminal portion of each of the plant's leaves, which is triggered by tiny hairs (called "trigger hairs" or "sensitive hairs") on ...

V Is For Venus Flytrap A Plant Alphabet Science Alphabet

Because Venus fly trap is a carnivore, care for it also differs from care for other houseplants in that you will be feeding it (preferably live) flies, mosquitoes, and gnats to nourish it (in addition to whatever it may catch on its own). Grasping the insect with tweezers, gently insert it into the trap in such a way that a piece of it makes contact with a trigger hair inside the trap.

Venus Fly Trap Plant: Care and Growing Guide

There is not one word about venus flytraps in this book. Why is the name "V is for Venus Flytrap" when they are not going to give any information about them. My granddaughter asked her dad about how they catch flies so I ordered this book thinking it would teach something about venus flytraps.

V Is for Venus Flytrap: A Plant Alphabet: Gagliano, Eugene ...

Venus flytrap, perennial carnivorous plant of the sundew family, notable for its unusual habit of catching and digesting insects and other small animals. Venus flytraps do not rely on carnivory for energy but rather use the nitrogen-rich animal proteins to enable their survival in marginal soil conditions.

Why do onions make us cry? What popular nut really isn't a nut at all? And what makes a forest a rainforest? The answers to these questions and many other fascinating facts can be found in *V is for Venus Flytrap: A Plant Alphabet*. Mankind's dependence upon the plant kingdom goes far beyond the food on our table and the air that we breathe. Plants have also provided shelter and led to important advances in medicine and science. Using the alphabet, horticulturalist Eugene Gagliano covers a wide range of topics including exotic species and their locations; plants' role in a healthy lifestyle; food crops and the world economy; and the importance of conservation and environmental stewardship in our world today. After reading *V is for Venus Flytrap*, young readers will be eager to get their hands dirty and their thumbs green! Retired elementary schoolteacher Eugene Gagliano has had a green thumb since boyhood. He has an A.A.S. in Ornamental Horticulture and owned a greenhouse business for several years. The author of several books for children including *C is for Cowboy: A Wyoming Alphabet* and *Four Wheels West: A Wyoming Number Book*, Eugene lives in Buffalo, Wyoming. Elizabeth Traynor received her BFA in illustration from the Rhode Island School of Design. Her work can be seen throughout the country, from book covers, newspapers, and magazines, to ads and packaging. She is a professor of illustration, passing her love and knowledge of the field on to the next generation of artists. Elizabeth lives in Natick, Massachusetts.

Describes the physical characteristics of these carnivorous plants, where they live, and how they trap and digest their insect prey.

Simplified Chinese and English edition of V is for Venus Flytrap: A Plant Alphabet

This exuberant celebration of the weird and wonderful world of plants is full of unexpected facts, perfect for budding botanists and armchair art lovers alike. A vibrant, close-up exploration of plants, this colourful book focuses on the extraordinary and unexpected, from the tiny bee orchid to the mighty strangler fig. Looking at plants from across the globe, the specimens featured include carnivorous and poisonous species; plants that provide us with food, materials, or medicine; those that have a special symbiotic relationship with animals or other plants; as well as especially rare or record-breaking species. Among many other awesome plants, discover: *Lithops hookeri*, the pebble plant that disguises itself as a stone to hide from predators; *Nepenthes lowii*, the tree shrew toilet pitcher that thrives on nutrients from tree shrew droppings; *Drosera rotundifolia*, the sundew that digests insects after trapping them with sticky dew-like droplets; and *Selaginella lepidophylla*, the resurrection plant that can survive for years without any rainwater at all. As you explore these amazing species, gain a foundation of knowledge about the plant kingdom. How do plants get energy? Can plants talk? Why do plants have flowers? Can plants move? Learn how plants get energy and nutrients, how animals and plants work together, how plants can send out chemical messages, and finally, how to protect plants and their habitats. Bursting with colour, there's something new and unexpected to discover on every page of this celebration of fierce and fabulous plants.

This book compiles new findings in plant electrophysiology from the work of internationally renowned experts in the fields of electrophysiology, bio-electrochemistry, biophysics, signal transduction, phloem transport, tropisms, ion channels, plant electrochemistry, and membrane transport. Opening with a historical introduction, the book reviews methods in plant electrophysiology, introducing such topics as measuring membrane potentials and ion fluxes, patch-clamp technique, and electrochemical sensors. The coverage includes experimental results and their theoretical interpretation.

Carnivorous plants are a unique botanical group, possessing modified leaves to trap, kill, and consume small creatures. As a result they are often depicted as killers in films and literature—from Audrey in *Little Shop of Horrors* to the world-dominating plants of *The Day of the Triffids*—yet many people regard carnivorous plants as exotic and beautiful specimens to collect

and display. In this abundantly illustrated and highly entertaining book, Dan Torre describes the evolution, structure, and scientific background of carnivorous plants. Examining their cultural and social history, he also shows how they have inspired our imagination and been represented in art, literature, cinema, animation, and popular culture. From the Venus flytrap—a species endemic to the Carolinas—to pitcher plants, this fascinating history of these singular, arresting, beautiful, yet deadly plants is certain to be devoured.
