The subject of earthquake engineering has been the focus of my teaching and research for many years. Thus, when Mario Paz, the editor of this handbook, asked me to write a Foreword, I was interested

and honored by his request. Worldwide, people are beginning to understand the severity of the danger to present and future generations caused by the destruction of the environment. Earthquakes pose a similar threat; thus, the proper use of methods for earthquake-resistant design and construction is vitally important for countries that are at high risk of being subjected to strong-motion earthquakes. Most seismic activity is the result of tectonic earthquakes. Tectonic earthquakes are very special events in that, although they occur frequently, their probability of becoming natural hazards for a specific urban area is very small. When a severe earthquake does occur near an urban area, however, its consequences are very large in terms of structural destruction and human suffering.

The hippocampus , the Greek word for seahorse, is one of the most fascinating and intriguing regions of the mammalian brain. It is a bilateral incurved seahorse-shaped structure of the cerebral cortex. The hippocampus has a highly distinctive morphology. It is composed of two regions, the dentate gyrus (DG) and the Cornu Ammonis (CA). The nerve cells of the main layer of the DG and CA regions, the granule cells and pyramidal cells respectively, are organised in a tri-synaptic lamellaire circuit. The granule and pyramidal cells are glutamatergic excitatory. The granule cells elicit unique histological, biochemical, developmental, physio- and pathological features. The hippocampus is also an area of the brain that elicits a high degree of plasticity, like synaptic and phenotypic plasticity. It is also one of the few regions of the brain where neurogenesis, the generation of new nerve cells, occurs throughout adulthood. The hippocampus is involved in physio-and pathological processes, like learning and memory.

On the eve of their Silver Anniversary, Mary Gooch is waiting for her husband Jimmy -- still every inch the handsome star athlete he was in high school -- to come home. As night turns to day, it becomes frighteningly clear to Mary that he is gone. Through the years, disappointment and worry have brought Mary's life to a standstill, and she has let her universe shrink to the well-worn path from the bedroom to the refrigerator. But her husband's disappearance startles her out of her inertia, and she begins a desperate search. For the first time in her life, she boards a plane and flies across the country to find her lost husband. So used to hiding from the world, Mary finds that in the bright sun and broad vistas of California, she is forced to look up from the pavement. And what she finds fills her with inner strength she's never felt before. Through it all, Mary not only finds kindred spirits, but reunites with a more intimate stranger no longer sequestered by fear and habit: herself.
